

Human Inheritance Lab

Objectives

To determine phenotypic characteristics and genotypes for some autosomal traits.
To determine the frequency (%) of dominant and recessive trait in a population.

Materials

Index

Procedure

Obtain the phenotypic characteristics and the corresponding gene genotypes for the traits listed below:

- In the first row of the index table 1, list the 27 traits/characteristics. Then check each trait the dominant phenotype and the recessive phenotype. Use the examples in the table for correct labeling.
- In the corresponding row of table 2, write your phenotypes and determine its dominance or recessive.
- In the third column of table 2, write your possible genotype for each genotype.

Questions

- If you show the recessive trait, then you must be homozygous recessive.
- If you show dominant trait, you may be heterozygous/dominant or homozygous for that trait.
 - If one of your parents shows the recessive trait, then you must have passed on a gene for the recessive trait, and you must be heterozygous for that trait.
 - If neither of your parents shows the recessive trait, you may not know if you are heterozygous or homozygous dominant for that trait. In that case, you **may** provide genotypes (heterozygous and homozygous dominant).

*** If you need help, you may ask your parents about their traits. * Do not touch your parents' blood!

***** If your parents get involved in a multigenerational gene project, please give **them** possible genotypes for dominant/dominant gene.
