Neuroendocrinology of Behavior and Emotions Heather K. Caldwell, H. Elliott Albers, 2024-03-22 This volume highlights current research on how the neuroendocrine system helps to influence emotional states and ultimately behavioral output. Social relationships and context appropriate behavioral responses are important for the survival of most vertebrate species. These relationships can range from transient social interactions to strong social bonding between sexual partners and social behaviors can be observed and evaluated from the individual to the group level. Further behavioral output is shaped by complex interactions between the physical environment, genetics, experience, and context, and are often modulated by the neuroendocrine system. In this book, experts in the field will provide a sweeping look at novel research in the neuroendocrine regulation of important behaviors ranging from parental care to social homeostasis, with a focus on comparative studies across vertebrate species. The first part of the book is dedicated to the neuroendocrinology of relationships, including the coordination of acoustic signals in songbirds, the complexity of social relationships in primates, and cooperation and parenting in humans. The second part of the book focuses on social behaviors and provides some insights into their regulation, including the neuroendocrine regulation of maternal behavior in rodents, the roles of oxytocin and vasopressin in the modulation of sex-specific social behavior, the interactions between adult neurogenesis, the neuroendocrine system, and social behavior, and a consideration of neuroendocrine influences on reproductive decision making across species. The book concludes with a section on environmental influences on neuroendocrine systems underlying behavior, including how social isolation and endocrine-disrupting chemicals affect the neuroendocrinology of behavior and emotions. Given its breadth, this volume is appropriate for undergraduate students, graduate students, postdoctoral researchers, and established researchers who are interested in neuroendocrinology and behavior. This is the sixteenth volume in the International Neuroendocrine Federation (INF) Masterclass in Neuroendocrinology series, which aims to illustrate the highest standards and highlight the latest technologies in basic and clinical research and aspires to provide inspiration for further exploration into the exciting field of neuroendocrinology. **McGraw-Hill encyclopedia of science & technology** McGraw-Hill, 2002 *Science and Technology*, 1963 *Science and technology; a purchase guide for branch and small public* Melvin Bennett, 1963

Disciplining Reproduction Adele E. Clarke, 2024-03-29 Reproductive issues from sex and contraception to abortion and cloning have been controversial for centuries and scientists who attempted to turn the study of reproduction into a discipline faced an uphill struggle Adele Clarke s engrossing story of the search for reproductive knowledge across the twentieth century is colorful and fraught with conflict Modern scientific study of reproduction human and animal began in the United States in an overlapping triad of fields biology medicine and agriculture Clarke traces the complicated paths through which physiological approaches to reproduction led to endocrinological approaches creating along the way new technoscientific products from contraceptives to hormone therapies to new modes of assisted conception for both humans and animals She focuses on the changing relations and often uneasy collaborations among scientists and the key social worlds most interested in their work major philanthropists and a wide array of feminist and medical birth control and eugenics advocates and recounts vividly how the reproductive sciences slowly acquired standing By the 1960s reproduction was disciplined and the

young and contested scientific enterprise proved remarkably successful at attracting private funding and support. But the controversies continue as women the targeted consumers create their own reproductive agendas around the world. Elucidating the deep cultural tensions that have permeated reproductive topics historically and in the present. *Disciplining Reproduction* gets to the heart of the twentieth century's drive to rationalize reproduction human and nonhuman in order to control life itself.
