

## Interpreting Topographical Maps

### Answer in Brief:

**1. What do topographical maps show?**

Topographical maps are large-scale maps that show both natural features such as mountains, hills, rivers, plateaus, ridges, etc. and man-made features such as roads, railway tracks, temples, bridges, building, etc.

**2. What is a contour line?**

A contour line is an imaginary line on a map that connect all points having the same height above mean sea level.

**3. Distinguish between Vertical Interval and Horizontal Equivalent.**

	Vertical Interval	Horizontal Equivalent
1	It is based on vertical levels	Represents horizontal distance
2	No measurement or scaling is required since the contour levels are indicated on the contour lines	The distance must be measured on the map and converted to actual distance by multiplying with the scale of the map
3	In a given map the contour interval is a constant	The horizontal equivalent varies with slope. Closer distance indicates steep slope and wider distance
