Finite Volumes for Complex Applications VII-Elliptic, Parabolic and Hyperbolic Problems Jürgen Fuhrmann, Mario Ohlberger, Christian Rohde, 2014-05-16 The methods considered in the 7th conference on Finite Volumes for Complex Applications Berlin June 2014 have properties which offer distinct advantages for a number of applications The second volume of the proceedings covers reviewed contributions reporting successful applications in the fields of fluid dynamics magnetohydrodynamics structural analysis nuclear physics semiconductor theory and other topics The finite volume method in its various forms is a space discretization technique for partial differential equations based on the fundamental physical principle of conservation Recent decades have brought significant success in the theoretical understanding of the method Many finite volume methods preserve further qualitative or asymptotic properties including maximum principles dissipativity monotone decay of free energy and asymptotic stability Due to these properties finite volume methods belong to the wider class of compatible discretization methods which preserve qualitative properties of continuous problems at the discrete level This structural approach to the discretization of partial differential equations becomes particularly important for multiphysics and multiscale applications Researchers PhD and masters level students in numerical analysis scientific computing and related fields such as partial differential equations will find this volume useful as will engineers working in numerical modeling and simulations

The Truth About Our Schools Melissa Benn, Janet Downs, 2015-11-06 A superb crucial blistering expose of all the myths about our education system that are all too often used to attack it Melissa

Benn again proves why she is one of country's most formidable education campaigners and why the powerful should fear her. Owen Jones Guardian columnist and best selling author Never has it been more urgent to publicise the truth about what works and doesn't work in our education system. Debunking the ideology of marketisation and exposing the half truths that pass for objective reporting, Benn and Downs meticulously lay out the evidence that a national system of comprehensive schools delivers the best outcomes. This hugely important book should be required reading for each new Education Secretary. Caroline Lucas MP. Opinions about comprehensive education are often made into easy to swallow sound bites by media and politicians alike and whilst the benefits of a genuinely comprehensive education for all pupils are obvious untruths have unwittingly evolved into hard facts. Based on Melissa Benn and Janet Downs work as part of the pioneering Local Schools Network *The Truth About Our Schools* calls for us to urgently and articulately challenge unquestioned myths about state education. Benn and Downs have meticulously built an argument for its still enormously vital role and rigorously challenge assumptions that Comprehensive education has failed. Local authorities control and hold back schools. Choice, competition and markets are the route to educational success. Choice will improve education in England, the free school model, Academies raise standards, Teachers don't need qualifications, Private schools have the magic DNA. Progressive education lowers standards. Anyone who thinks that comprehensive education cannot deliver that local authorities are the chief block to improving our school system that competition and markets are the route to educational success and that private schools hold the magic DNA that can simply be transferred to other state schools will have their beliefs shaken by this blisteringly incisive book.
