Hands-On Science and Technology for Ontario, Grade 2 Jennifer E. Lawson, 2023-12-01 Hands On Science and Technology for Ontario Grade 2 is an easy to use resource for teaching the five strands of the Ontario science and technology 2022 curriculum: STEM Skills and Connections, Life Systems, Growth and Changes in Animals, Matter and Energy, Properties of Liquids and Solids, Structures and Mechanisms, Simple Machines and Movement, Earth and Space, Systems Air and Water in the Environment. Hands On Science and Technology for Ontario Grade 2 encourages students' natural curiosity about science and the world around them as they participate in hands-on activities and explore their environment. Using the inquiry approach, this comprehensive resource fosters students' understanding of STEM, science, technology, engineering, and mathematics skills, makes coding and emerging technologies approachable for both teachers and students, emphasizes personalized learning using a four-part instructional process: activate, action, consolidate, and debrief, enhance, relates science and technology to sustainability and our changing world including society, the economy, and the environment, focuses on practical applications of the engineering design process as students work on solutions to real-life problems, builds understanding of Indigenous knowledge and perspectives specific to Ontario, explores contributions to science and technology by people with diverse lived experiences. Using proven Hands On features, this book provides resources for both teachers and students, including background information on the science topics, complete easy-to-follow lesson plans, materials lists, and digital image banks and reproducibles. Find download instructions in the Appendix of the book. Innovative elements developed specifically for the Ontario curriculum include the following: plugged and unplugged coding activities in nearly every lesson, land-based learning activities, opportunities for students to use the scientific research process, scientific experimentation process, and engineering design process, a fully developed assessment plan to guide assessment for as and of learning, ideas and prompts for STEM Makerspace project.

Distance Geometry Antonio Mucherino, Carlile Lavor, Leo Liberti, Nelson Maculan, 2012-12-22 This volume is a collection of research surveys on the Distance Geometry Problem (DGP) and its applications. It will be divided into three parts: Theory, Methods, and Applications. Each part will contain at least one survey and several research papers. The first part, Theory, will deal with theoretical aspects of the DGP, including a new class of problems and the study of its complexities, as well as the relation between DGP and other related topics such as distance matrix theory, Euclidean distance matrix completion problem, multispherical structure of distance matrices, distance geometry, and geometric algebra, algebraic distance geometry theory, visualization of K -dimensional structures in the plane, graph

rigidity and theory of discretizable DGP symmetry and complexity The second part Methods will discuss mathematical and computational properties of methods developed to the problems considered in the first chapter including continuous methods based on Gaussian and hyperbolic smoothing difference of convex functions semidefinite programming branch and bound discrete methods based on branch and prune geometric build up graph rigidity and also heuristics methods based on simulated annealing genetic algorithms tabu search variable neighborhood search Applications will comprise the third part and will consider applications of DGP to NMR structure calculation rational drug design molecular dynamics simulations graph drawing and sensor network localization This volume will be the first edited book on distance geometry and applications The editors are in correspondence with the major contributors to the field of distance geometry including important research centers in molecular biology such as Institut Pasteur in Paris

Epidemiology and Medical Statistics, 2007-11-21 This volume representing a compilation of authoritative reviews on a multitude of uses of statistics in epidemiology and medical statistics written by internationally renowned experts is addressed to statisticians working in biomedical and epidemiological fields who use statistical and quantitative methods in their work While the use of statistics in these fields has a long and rich history explosive growth of science in general and clinical and epidemiological sciences in particular have gone through a sea of change spawning the development of new methods and innovative adaptations of standard methods Since the literature is highly scattered the Editors have undertaken this humble exercise to document a representative collection of topics of broad interest to diverse users The volume spans a cross section of standard topics oriented toward users in the current evolving field as well as special topics in much need which have more recent origins This volume was prepared especially keeping the applied statisticians in mind emphasizing applications oriented methods and techniques including references to appropriate software when relevant Contributors are internationally renowned experts in their respective areas Addresses emerging statistical challenges in epidemiological biomedical and pharmaceutical research Methods for assessing Biomarkers analysis of competing risks Clinical trials including sequential and group sequential crossover designs cluster randomized and adaptive designs Structural equations modelling and longitudinal data analysis
