You will be answering these questions and turning them in to me:

- Here's my general topic:
- Here's what I want to do with that topic:
- Here's the math I want to incorporate:

Key Dates:

- Exploration Introduction – Monday, Dec. 8<sup>th</sup>
- In the Computer Lab to Explore Ideas – Wednesday, Dec. 10<sup>th</sup>
- **Answers to 3 questions from above – DUE Wednesday, Dec. 17<sup>th</sup> (5 points)**
- Go through sample papers and grading – Monday, Jan. 5<sup>th</sup>
- In the LMC to Research Topic – ?
- **Outline of Exploration – DUE Wednesday, Jan. 14<sup>th</sup> (10 points)**
- **Rough Draft of Exploration – DUE Friday, Jan. 30<sup>th</sup> (25 points)**
- Mr. Peterson meets with students about first draft – Week of Feb. 9<sup>th</sup>
- **Completed Exploration – DUE Friday, Feb. 27<sup>th</sup> (100 points)**
  - You will be submitting this to Turnitin.com and giving me a paper copy.

Grading:

- Each part must be turned in at the start of class that day.
- If a part is turned in late (including to turnitin.com), there is a 10% reduction of the grade for that assignment for each day it is not turned in.

FAQ:

**What is the difference between a mathematical exploration and an extended essay in mathematics?**

The criteria are completely different. It is intended that the exploration is to be a much less extensive piece of work than a mathematics extended essay. The intention is for students to "explore" an idea rather than have to do the formal research demanded in an extended essay.

**How long should it be?**

It is difficult to be prescriptive about mathematical writing. However, the Mathematics SL guide states that 6–12 pages should be appropriate. A common failing of mathematical writing is excessive repetition, and this should be avoided, as such explorations will be penalized for lack of conciseness. However, it is recognized that some explorations will require the use of several diagrams, which may extend them beyond the page limit.

**How long should it take?**

It is difficult to give a single answer. However, the guideline of 10 hours class time with approximately the same amount of time outside class should suffice for students to develop their ideas and complete the exploration.

Exploring Mathematics with CAS Assistance Lydia S. Novozhilova, Robert D. Dolan, 2022-11-08 Exploring Mathematics with CAS Assistance is designed as a textbook for an innovative mathematics major course in using a computer algebra system CAS to investigate explore and apply mathematical ideas and techniques in problem solving The book is designed modularly with student investigations and projects in number theory geometry algebra single variable calculus and probability The goal is to provoke an inquiry mindset in students and to arm them with the CAS tools to investigate low entry open ended questions in a variety of mathematical arenas Because of the modular design the individual chapters could also be used selectively to design student projects in a number of upper division mathematics courses These projects could in fact lead into undergraduate research projects The existence of powerful computer algebra systems has changed the way mathematicians perform research this book enables instructors to put some of those new methods and approaches into their undergraduate instruction Prerequisites include a basic working knowledge of discrete mathematics and single variable calculus Programming experience and some basic familiarity with elementary probability and statistics are beneficial but not required The book takes a software agnostic approach and emphasizes algorithmic structure of solution methods by systematically providing their step by step verbal descriptions or suitable pseudocode that can be implemented in any CAS Here is a possible addition to the book description about this new information The code templates for the labs from the book are now available on the github an AI powered developer platform for sharing codes A user can find the Jupyter Notebooks with the labs in the repository [https://github.com/LidaUrazhdina/LabTemplates\\_for\\_Math\\_with\\_CAS](https://github.com/LidaUrazhdina/LabTemplates_for_Math_with_CAS) Here is a possible addition to the book description about this new information The code templates for the labs from the book are now available on the github an AI powered developer platform for sharing codes A user can find the Jupyter Notebooks with the labs in the repository [https://github.com/LidaUrazhdina/LabTemplates\\_for\\_Math\\_with\\_CAS](https://github.com/LidaUrazhdina/LabTemplates_for_Math_with_CAS)

*Exploring Mathematics* Craig Johnson, 2014-08 Exploring Mathematics Investigations with Functions is intended for a one or two term course in mathematics for college students majoring in the social sciences English history music art education or any of the other majors within liberal arts The mathematics course of this scope with an algebra prerequisite is a popular selection for liberal arts students This 9 chapter textbook offers modern applications of mathematics in the liberal arts as well as aesthetic features of this rich facet of history and ongoing advancement of human society With a central theme around the use of the concept of functions and the inclusion of unique topics and chapters Exploring Mathematics enables students to explore the next level of mathematics It attempts to answer the questions How does mathematics help us to better our society and understand the world around us and What are some of the unifying ideas of

mathematics The central theme helps to impress upon the student the feeling that mathematics is more than a disconnected potpourri of rules and tricks Although it would be inappropriate to force a functional connection in every single section the theme is used whenever possible to provide conceptual bridges between chapters Developing the concept of a function augments the presentation of many topics in every chapter The Text s Objectives The author chose the topics based on meeting the specific NCTM curriculum standards to

- 1 Strengthen estimation and computational skills
- 2 Utilize algebraic concepts
- 3 Emphasize problem solving and reasoning
- 4 Emphasize pattern and relationship recognition
- 5 Highlight importance of units in measurement
- 6 Highlight importance of the notion of a mathematical function
- 7 Display mathematical connections to other disciplines

**Pedagogy in a New Tonality** Peter Gouzouasis, 2011 This is a book for teachers by teachers from elementary school to university level classrooms It is about the use of creative instructional strategies in K 12 classroom settings and the transformations the teachers made in their journeys from being traditional practitioners to becoming pedagogical in their approaches to teaching and learning across the curriculum Over twenty teachers conducted research in their classrooms on the implementation of creative strategies tactics graphics organizers and visual journals in teaching and learning They have written their inquiries in a narrative style informed by various forms of arts based educational research Their research is approachable and usable by other teachers who are interested in becoming reflective reflexive practitioners Many of the strategies tactics and graphics organizers are described by Barrie Bennett in his widely used textbook *Beyond Monet The Artful Science of Instructional Intelligence* However through their journeys of becoming teacher learner researchers many discovered numerous creative variations of Bennett s work as it was implemented in their classrooms While there are many professional books that provide ideas on collaborative learning and creative teaching approaches there is very little published research on the efficacy of these concepts in the K 12 classroom These inquiries provide practical insights into how inspired teachers can conduct research on improving their own practice as well as on greatly improving their students learning

*Making the Connection* Marilyn Paula Carlson,Chris Rasmussen,2008 The chapters in this volume convey insights from mathematics education research that have direct implications for anyone interested in improving teaching and learning in undergraduate mathematics This synthesis of research on learning and teaching mathematics provides relevant information for any math department or individual faculty member who is working to improve introductory proof courses the longitudinal coherence of precalculus through differential equations students mathematical thinking and problem solving abilities and students understanding of fundamental ideas such as variable and rate of change Other chapters include information about programs that have been successful in supporting students continued study of mathematics The authors provide many examples and ideas to help the reader infuse the knowledge from mathematics education research into mathematics teaching practice University mathematicians and community college faculty spend much of their time engaged in work to improve their teaching Frequently they are left to their own experiences and informal conversations with colleagues to develop new approaches to support student learning and their continuation in mathematics Over the past 30 years research in undergraduate mathematics education has produced knowledge about the development of mathematical understandings and models for supporting students mathematical learning Currently very little of this knowledge is affecting teaching practice We hope that this volume will open a meaningful dialogue between researchers and practitioners toward the goal of realizing improvements in undergraduate mathematics curriculum and instruction **Quarterly Review** ,1861 *The National Quarterly Review* ,1879 For the Learning of Mathematics ,1994
