

## Temperature Patterns Lab - Part 2

Answer the following questions by comparing the temperature charts on the temperature patterns climographs handout. In your answers, consider the one temperature control factor that is most responsible for the patterns shown choose from: (1) latitude, (2) land-water contrasts, (3) wind patterns, or (4) altitude. You may use the same answer for more than one question. You should locate each of the cities on a world map before trying to answer the questions.

1. Which factor primarily explains the different temperature patterns of St. Louis and Oakland?

The primary factor is land-water contrast. St. Louis is continental while Oakland is coastal.

2. Why is the warmest month of summer different in St. Louis and Oakland?

It is different because of wind patterns. The winds coming off the ocean in Oakland keep the summer cooler than the summers you would experience in St. Louis.

3. Why does St. Louis have colder winters than Norfolk?

St. Louis has colder winter than Norfolk because Norfolk is located along the coast next to the Gulf Stream. The Gulf Stream transports warm air from the tropics making it a warmer area.

4. Although both are coastal cities, compared to Oakland, Norfolk has a very "continental" temperature pattern. Why?

It has a very continental temperature pattern because the winds are delivering continental air masses across the east coast.

5. Which factor primarily explains the difference in temperature patterns between Fairbank and St. Louis?

The primary factor is latitude because it shows the temperature differential trend between Fairbank and St. Louis.

6. Which factor primarily explains the difference in temperature patterns between Fairbanks and Nome?

The primary factor is the land-water contrast because it describes the temperature differential trend between Fairbank and Nome.

7. Why does Lihue have a smaller annual temperature range than Oakland?
