**Perfect Pitch in the Key of Autism** Henny Kupferstein, Susan Rancer, 2016-07-30 Autistic people and musical individuals often have perfect pitch a gift they were born with The musical gift may be accompanied with learning differences such as reading comprehension problems trouble with mathematics and significant difficulties in learning how to read music

This book was written by a music therapist and an autistic researcher and is endorsed by leading experts in the field of autism and special needs education. The Rancer Method is presented as page by page instructions to be implemented with readily available method books so that every piano teacher can follow it and do well by their students. By focusing on the abilities rather than the deficits of people with learning perceptual motor and other differences, Kupferstein and Rancer have developed a revolutionary piano pedagogy that will empower individuals with autism and other differences by unleashing the power of what can be done.

Stephen M Shore, Ed D Internationally known professor consultant speaker and author on issues related to the autism spectrum and special education. Person on the autism spectrum. This book will help the quirky kid who is different to be successful in music. This method may help open musical doors for many individuals on the autism spectrum.

Temple Grandin, author *Thinking in Pictures* and *The Autistic Brain*. *Ambient Intelligence*, Giuseppe Riva, 2005. The metaphor of Ambient Intelligence (AmI) tries to picture a vision of the future where all of us will be surrounded by intelligent electronic environments and this ambient has claims to being sensitive and responsive to our needs. Ambient Intelligence without invasion of privacy represents a long term vision for the EU Information Society Technologies Research programme. A strong multi disciplinary and collaborative approach is a key requirement for large scale technology innovation and the development of effective applications. Up to now most of the books and papers related to AmI focus their analysis on the technology potential only. An important feature of this volume is the link between the technology through the concepts of ubiquitous computing and intelligent interface and the human experience of interacting in the world through a neuro psychological vision centred on the concept of presence. Presence, the sense of being there, is the experience of projecting one's mind through media to other places, people and designed environments. The combination of recent discoveries in cognitive neuroscience which make it possible to acquire a better understanding of the human aspects of presence and the breakthroughs at the level of the enabling technologies make it increasingly possible to build novel systems based on this understanding. The goal of this volume is to assess the technologies and processes that are behind the AmI vision in order to help the development of state of the art applications. More in detail, this volume aims at supporting researchers and scientists interested in the understanding and exploiting the potential of AmI.
