

## PROBABILITY AND INHERITANCE – Lab 2: MENDELLIAN INHERITANCE

/30

**Pre-Lab: A Brief Review Mendel's Postulates**

**Law of dominance:** one form of an allele masks a different allele of the gene when different alleles are present for the same trait.

**Law of segregation:** during gamete formation (egg or sperm), the genes for a trait separate, so that each gamete has only one allele form of the genes for the trait.

**Law of independent assortment:** as gametes form, the genes for various traits separate independently of one another.

Mendel studied "factors" that caused traits. Today, we call these factors "genes" and versions of the genes are called "alleles".

**The Law of Probability**

We will be applying the law of probability in our study on heredity. This is a mathematical law that expresses outcomes of an event as ratios or percent probability. It depends on the number of outcomes.

e.g. If there are two outcomes only, the law of probability states that the probability is  $\frac{1}{2}$  or 50%.

**OBJECTIVES:** In this lab you will

- Use pennies to simulate Mendel's postulates of trait behaviour
- Apply Mendel's postulates and the law of probability
- For each part, you will develop a written purpose
- Create an appropriate chart to display data meaningfully for Part I

**MATERIALS:**

2-pennies

masking tape

pen or pencil and paper

In your lab write up, you will need to compose a purpose for each part of this lab. The purpose should include an explanation of how the procedure relates to one or more of Mendel's postulates. Next is the data (charts, tables, and/or anecdotes), followed by the results questions. Be sure to label charts, tables, answers for each part, well. This lab handout goes on the FRONT of the lab.
