Proceedings of the 9th Workshop on Aspects, Components, and Patterns for Infrastructure Software (ACP4IS '10) Bram Adams, Michael Haupt, Daniel Lohmann, 2010 Aspect oriented programming component models and design patterns are modern and actively evolving techniques for improving the modularization of complex software In particular these techniques hold great promise for the development of systems infrastructure software e g application servers middleware virtual machines compilers operating systems and other software that provides general services for higher level applications The developers of infrastructure software are faced with increasing demands from application programmers needing higher level support for application development Meeting these demands requires careful use of software modularization techniques since infrastructural concerns are notoriously hard to modularize Aspects components and patterns provide very different means to deal with infrastructure software but despite their differences they have much in common For instance component models try to free the developer from the need to deal directly with services like security or transactions These are primary examples of crosscutting concerns and modularizing such concerns are the main target of aspect oriented languages Similarly design patterns like Visitor and Interceptor facilitate the clean modularization of otherwise tangled concerns Building on the ACP4IS meetings at AOSD 2002 2009 this workshop aims to provide a highly interactive forum for researchers and developers to discuss the application of and relationships between aspects components and patterns within modern infrastructure software The goal is to put aspects components and patterns into a common reference frame and to build connections between the software engineering and systems communities

Legal Protection for Computer-Implemented Inventions Sabine Kruspig, Claudia Schwarz, 2016-04-24 As a result of the incorporation of computer software into countless commercial and industrial products the patentability of software has become a vital issue in intellectual property law This indispensable book provides an overview on the current status of computer implemented inventions in patent law across Europe and major jurisdictions worldwide A hugely practical field research tool with guidance based on case law it examines the major hurdles in each particular country and describes the best practice to be adopted Clearly showing how enforceable software patent applications can be competitively drafted and how a patent portfolio for

computer implemented inventions can be established in several countries without spending money unnecessarily on problematic examination proceedings this book covers such issues and topics as the following claim categories for patent applications sufficient level of abstraction breadth of the claimed invention fundamental terms of computing and terminological traps probability for patents dependent on software application areas and patents in core areas of computing With separate chapters for the key countries Germany the United Kingdom France the United States China Korea Japan India and the European Patent Office the legal situation for computer implemented inventions in each country or region this book includes guidance on prosecution under national law analyses of relevant court decisions practice checklists and an outlook on future developments The authors describe claim formulation based on actual cases and on principles of computer science in order to show what might be or might not be patentable in each jurisdiction With this incomparable resource patent attorneys and patent professionals in companies will get a basis for making decisions about the most appropriate jurisdictions in which to file patent applications This book will also be of great value to computer professionals who are affected by the protection of software or who are actively involved in the protection of software by patent law

Compiler Construction David A. Watt, 2003-06-29 ETAPS2000 was the third instance of the European Joint Conference on Theory and Practice of Software ETAPS is an annual federated conference that was established in 1998 by combining a number of existing and new conferences This year it comprised five conferences FOSSACS FASE ESOP CC TACAS and satellite workshops CBS CMCS CoFI GRATRA INT seven invited lectures a panel discussion and ten tutorials The events that comprise ETAPS address various aspects of the system development process including specification design implementation analysis and improvement The languages methodologies and tools which support these activities are all well within its scope Different blends of theory and practice are represented with an inclination towards theory with a practical motivation on one hand and soundly based practice on the other Many of the issues involved in software design apply to systems in general including hardware systems and the emphasis on software is not intended to be exclusive
