

Ch. 1 Introducing Science

1.1 Beginning Science

- Science is the study of things and events around us. It is divided into several branches. People who are experts in one or more branches of science are called scientists.
- Science helps us to solve problems and improves our living standard. However science is not always good for mankind and has its limitations.

1.2 The Work of a Scientist

- Scientists find things out by carrying out scientific investigations. The steps involved are: Make observation → Make hypotheses → Carry out experiments → Measure, record and analyse data → Draw a conclusion

1.3 The Science Laboratory

- We carry out experiments in the laboratory, where there is a lot of apparatus and equipment.
- We must follow safety rules in the laboratory.

1.4 Working in the Science Laboratory

- A Bunsen burner is used for heating things in the laboratory. It gives a blue flame when the air hole is closed and a yellow flame when the air hole is opened.

Yellow flame	Blue flame
Yellow in colour	Blue in colour
Irregular in shape	Regular in shape
Quieter	Noisier
Less hot	hotter

- Sometimes the Bunsen burner may strike back if the air hole is fully open. The flame changes to a green colour and you can hear a loud sound. You should turn off the gas tap immediately.
- The chimney of Bunsen flame is not very hot because it contains unburnt gas.
- We can use a dropper to transfer a small amount of liquid.

1.5 Measurements in Science
