Lazy Learning David W. Aha, 2013-06-29 This edited collection describes recent progress on lazy learning a branch of machine learning concerning algorithms that defer the processing of their inputs reply to information requests by combining stored data and typically discard constructed replies It is the first edited volume in AI on this topic whose many synonyms include instance based memory based exemplar based and local learning and whose topic intersects case based reasoning and edited k nearest neighbor classifiers It is intended for AI researchers and students interested in pursuing recent progress in this branch of machine learning but due to the breadth of its contributions it should also interest researchers and practitioners of data mining case based reasoning statistics and pattern recognition

Goal-driven Learning Ashwin Ram, David B. Leake, 1995 Brings together a diversity of research on goal driven learning to establish a broad interdisciplinary framework that describes the goal driven learning process In cognitive science artificial intelligence psychology and education a growing body of research supports the view that the learning process is strongly influenced by the learner's goals The fundamental tenet of goal driven learning is that learning is largely an active and strategic process in which the learner human or machine attempts to identify and satisfy its information needs in the context of its tasks and goals its prior knowledge its capabilities and environmental opportunities for learning This book brings together a diversity of research on goal driven learning to establish a broad interdisciplinary framework that describes the goal driven learning process It collects and solidifies existing

results on this important issue in machine and human learning and presents a theoretical framework for future investigations. The book opens with an overview of goal driven learning research and computational and cognitive models of the goal driven learning process. This introduction is followed by a collection of fourteen recent research articles addressing fundamental issues of the field including psychological and functional arguments for modeling learning as a deliberative planful process, experimental evaluation of the benefits of utility based analysis to guide decisions about what to learn, case studies of computational models in which learning is driven by reasoning about learning goals, psychological evidence for human goal driven learning and the ramifications of goal driven learning in educational contexts. The second part of the book presents six position papers reflecting ongoing research and current issues in goal driven learning. Issues discussed include methods for pursuing psychological studies of goal driven learning, frameworks for the design of active and multistrategy learning systems and methods for selecting and balancing the goals that drive learning. A Bradford Book **Analytic**

Learning Methods for Pattern Recognition Kar-Ann Toh, Huiping Zhuang, Simon Liu, Zhiping Lin, 2025-05-31 This textbook is a consolidation of learning methods which comes in an analytic form. The covered learning methods include classical and advanced solutions to problems of regression, minimum classification error, maximum receiver operating characteristics, bridge regression, ensemble learning and network learning. Both the primal and dual solution forms are discussed for over and under determined systems. Such coverage provides an important perspective for handling systems with overwhelming samples or systems with overwhelming parameters. For goal driven classification, the solutions to minimum classification error, maximum receiver operating characteristics, bridge regression and ensemble learning represent recent advancements in the literature. In this book, the exercises offer instructors and students practical experience with real world applications.

Machine Learning for Civil and Environmental Engineers M. Z. Naser, 2023-08-08 Accessible and practical framework for machine learning applications and solutions for civil and environmental engineers.
