

Spring 2023 Study Guide What you should know (for the midterm): pt.2

Where does the majority of magma/lava form on Earth (which type of boundary or hotspot)?

- Mid-ocean ridges

5) Introducing igneous rocks

The 3 main rock types

- **Igneous rocks:** "from fire", form from the cooling of magma-lava-pyroclastic material
 - Volcanoes produce igneous rocks. If magma stalls underground and cools → also forms igneous rock → intrusive, If erupted and cooled above ground → extrusive
 - Basalt, granite, gabbro, obsidian, rhyolite, andesite
- **Sedimentary rocks:** rocks are weathered into the sediment by wind, water, or ice → lithified into sedimentary rock
 - Limestone, sandstone, coal, shale
- **Metamorphic rocks:** rocks changed due to extreme heat, pressure, or chemically active fluids
 - Phyllite, schist, gneiss, quartzite, marble

The rock cycle

- "new" igneous rocks → weathering: physical and chemical weakening of rocks in place → erosion: movement of weathered material away from the source by wind, water, and gravity → deposition, burial, and compaction of sediment creates sedimentary rocks → Metamorphism of all types of rocks

Rocks vs. minerals (cookies vs. ingredients)

-

Understanding geological relationships: horizontality and superposition for sedimentary rocks. Relative age relationships.

- **Horizontally sedimentary rocks:** sediments are originally deposited in horizontal layers
- **Superposition sedimentary rocks:** in an undeformed sequence of sedimentary rock layers, each layer is younger than the layer beneath it and older than the layer above it

What is a fault? What is a fold?

- **Fault:** a fracture along which the rocks on either side have moved relative to each other
 - The amount it moved is called a slip
- **Fold:** layered rocks are deformed into curves, and occur in a variety of shapes, sizes, and geometries

Humans Study Guide Answers
