Low Rank And Sparse Modeling For Visual Analysis:

　　Low-Rank and Sparse Modeling for Visual Analysis Yun Fu,2014-10-30 This book provides a view of low rank and sparse computing especially approximation recovery representation scaling coding embedding and learning among unconstrained visual data The book includes chapters covering multiple emerging topics in this new field It links multiple popular research fields in Human Centered Computing Social Media Image Classification Pattern Recognition Computer Vision Big Data and Human Computer Interaction Contains an overview of the low rank and sparse modeling techniques for visual analysis by examining both theoretical analysis and real world applications 　　*Low-Rank Approximation* Ivan Markovsky,2018-08-03 This book is a comprehensive exposition of the theory algorithms and applications of structured low rank approximation Local optimization methods and effective suboptimal convex relaxations for Toeplitz Hankel and Sylvester structured problems are presented A major part of the text is devoted to application of the theory with a range of applications from systems and control theory to psychometrics being described Special knowledge of the application fields is not required The second edition of Low Rank Approximation is a thoroughly edited and extensively rewritten revision It contains new chapters and sections that introduce the topics of variable projection for structured low rank approximation missing data estimation data driven filtering and control stochastic model representation and identification identification of polynomial time invariant systems and blind identification with deterministic input model The book is complemented by a software implementation of the methods presented which makes the theory directly applicable in practice In particular all numerical examples in the book are included in demonstration files and can be reproduced by the reader This gives hands on experience with the theory and methods detailed In addition exercises and MATLAB Octave examples will assist the reader quickly to assimilate the theory on a chapter by chapter basis Each chapter is completed with a new section of exercises to which complete solutions are provided Low Rank Approximation second edition is a broad survey of the Low Rank Approximation theory and applications of its field which will be of direct interest to researchers in system identification control and systems theory numerical linear algebra and optimization The supplementary problems and solutions render it suitable for use in teaching graduate courses in those subjects as well 　　*Low-Rank Models in Visual Analysis* Zhouchen Lin,Hongyang Zhang,2017-06-06 Low Rank Models in Visual Analysis Theories Algorithms and Applications presents the state of the art on low rank models and their application to visual analysis It provides insight into the ideas behind the models and their algorithms giving details of their formulation and deduction The main applications included are video denoising background modeling image alignment and rectification motion segmentation image segmentation and image saliency detection Readers will learn which Low rank models are highly useful in practice both linear and nonlinear models how to solve low rank models efficiently and how to apply low rank models to real problems Presents a self contained up to date introduction that covers underlying theory algorithms and the state of the art in current applications Provides a full and clear explanation of

the theory behind the models Includes detailed proofs in the appendices **Anomaly Detection in Video Surveillance** Xiaochun Wang,2024-08-06 Anomaly detection in video surveillance stands at the core of numerous real world applications that have broad impact and generate significant academic and industrial value The key advantage of writing the book at this point in time is that the vast amount of work done by computer scientists over the last few decades has remained largely untouched by a formal book on the subject although these techniques significantly advance existing methods of image and video analysis and understanding by taking advantage of anomaly detection in the data mining community and visual analysis in the computer vision community The proposed book provides a comprehensive coverage of the advances in video based anomaly detection including topics such as the theories of anomaly detection and machine perception for the functional analysis of abnormal events in general the identification of abnormal behaviour and crowd abnormal behaviour in particular the current understanding of computer vision development and the application of this present understanding towards improving video based anomaly detection in theory and coding with OpenCV The book also provides a perspective on deep learning on human action recognition and behaviour analysis laying the groundwork for future advances in these areas Overall the chapters of this book have been carefully organized with extensive bibliographic notes attached to each chapter One of the goals is to provide the first systematic and comprehensive description of the range of data driven solutions currently being developed up to date for such purposes Another is to serve a dual purpose so that students and practitioners can use it as a textbook while researchers can use it as a reference book A final goal is to provide a comprehensive exposition of the topic of anomaly detection in video media from multiple points of view Machine Learning Techniques on Gene Function Prediction Volume II Quan Zou,Arun Kumar Sangaiah,Dariusz Mrozek,2023-04-11 The Recent Advances in Transdisciplinary Data Science Henry Han,Erich Baker,2023-01-28 This book constitutes the refereed proceedings of the First Southwest Data Science Conference on The Recent Advances in Transdisciplinary Data Science SDSC 2022 held in Waco TX USA during March 25 26 2022 The 14 full papers and 2 short papers included in this book were carefully reviewed and selected from 72 submissions They were organized in topical sections as follows Business and social data science Health and biological data science Applied data science artificial intelligence and data engineering **Magnetic Resonance Image Reconstruction** Mehmet Akcakaya,Mariya Ivanova Doneva,Claudia Prieto,2022-11-04 Magnetic Resonance Image Reconstruction Theory Methods and Applications presents the fundamental concepts of MR image reconstruction including its formulation as an inverse problem as well as the most common models and optimization methods for reconstructing MR images The book discusses approaches for specific applications such as non Cartesian imaging under sampled reconstruction motion correction dynamic imaging and quantitative MRI This unique resource is suitable for physicists engineers technologists and clinicians with an interest in medical image reconstruction and MRI Explains the underlying principles of MRI reconstruction along with the latest research Gives example codes for some of the methods presented Includes updates

must deal with collections of high dimensional data High dimensional data usually have intrinsic low dimensional representations which are suited for subsequent analysis or processing Therefore finding low dimensional representations is an essential step in many machine learning and data mining tasks Low rank and sparse modeling are emerging mathematical tools dealing with uncertainties of real world data Leveraging on the underlying structure of data low rank and sparse modeling approaches have achieved impressive performance in many data analysis tasks Since the general rank minimization problem is computationally NP hard the convex relaxation of original problem is often solved One popular heuristic method is to use the nuclear norm to approximate the rank of a matrix Despite the success of nuclear norm minimization in capturing the low intrinsic dimensionality of data the nuclear norm minimizes not only the rank but also the variance of matrix and may not be a good approximation to the rank function in practical problems To mitigate above issue this thesis proposes several nonconvex functions to approximate the rank function However It is often difficult to solve nonconvex problem In this thesis an optimization framework for nonconvex problem is further developed The effectiveness of this approach is examined on several important applications including matrix completion robust principle component analysis clustering and recommender systems Another issue associated with current clustering methods is that they work in two separate steps including similarity matrix computation and subsequent spectral clustering The learned similarity matrix may not be optimal for subsequent clustering Therefore a unified algorithm framework is developed in this thesis To capture the nonlinear relations among data points we formulate this method in kernel space Furthermore the obtained continuous spectral solutions could severely deviate from the true discrete cluster labels a discrete transformation is further incorporated in our model Finally our framework can simultaneously learn similarity matrix kernel and discrete cluster labels The performance of the proposed algorithms is established through extensive experiments This framework can be easily extended to semi supervised classification   **Government Reports Annual Index** ,1990   **Proceedings of the ...
