Fornace, 2006 Rollover Prevention, Crash Avoidance, Crashworthiness, Ergonomics and Human Factors, 2003 Structures Under Extreme Loading Conditions, 1995 Arch Bridges A. Sinopoli, 2020-12-17 Modern structural engineering surprises us with the mastery and certainty with which it plans and carries out daring projects such as the most recent metal or concrete bridges whether they be suspension or arch bridges On the other hand little is yet known about the state of knowledge of construction science and techniques which well before the arrival of modern methods based on the mechanics of deformable continua made it possible in the past to erect the vaulted masonry structures that we have inherited The fact that these have lasted through many centuries to our time and are still in a fairly good state of conservation makes them competitive as far as stability and durability are concerned with those constructed in other materials Although it is known that the equilibrium of the arch is guaranteed by any funicular whatsoever of the loads contained inside the profile of an arch finding the unique solution is not such a certainty In other words the problem of the equilibrium of vaulted structures is Poleni's problem the one for which the Venetian scientist was able to give an exemplary solution on the occasion of the assessment of the dome of St Peter's Arch Bridges focuses on the main aspects of the debate about the masonry arch bridge History of structural mechanics and construction theoretical models analysis for assessment
