Metacognition in Mathematics Education Annemie Desoete,Marcel Veenman,2006 For some decades theoretical and empirical research has focused on the phenomenon of metacognition and its overwhelming importance to human learning and performance The real growth in theoretical and empirical studies about metacognition started with the work of Flavell at the end of the 1970s in the context of research on metamemory The metacognitive concept has been very successful stimulating a lot of studies The metacognitive research on reading peaked in the 1980s and has levelled since Metacognition has more recently also been applied to mathematics Metacognition can be differentiated into two central components namely metacognitive knowledge and metacognitive processes or skills In the same vein Brown 1978 distinguished metacognitive knowledge about the interaction between person task and strategies characteristics from the regulation of one s own cognitive activities The purpose of this book is to help to summarise and clarify some of the issues on the conceptualisation the assessment and the training of metacognition on mathematical issues in learners with and without mathematics learning disabilities metacognition in mathematics performance [Teacher in Zimbabwe](#) ,2014 [Teaching Children Mathematics](#) ,1994 *South African national bibliography* ,1999 Classified list with author and title index
