

## CURIX 60 PROCESSOR

High-quality images with  
table-top processor

### Maximum performance on minimum footprint

The Curix 60 is a table-top processor equipped with highly performant technology. It can be easily fitted into a small space, still guaranteeing maximum image quality. The Curix 60 is ideal for low-volume radiology and provides consistent, high-quality processing of film with a maximum width of 36 cm. Furthermore, the Curix 60 may serve as an ideal back-up for your regular processor.

### Superior performance

Thanks to the infrared dryer, superior drying performance is obtained together with low power consumption and a low noise level. To ensure consistent high-quality images, the bath temperature is controlled electronically.

### Compact and time-saving

Due to the clever location of the replenisher tanks, the position of the film delivery slot and the boomerang system, which brings the processed film on top of the processor, its floor

space is minimal and access is easy. The exclusive Curix 60 light-tight cover design allows you to leave the darkroom after approx. 15 seconds. You don't need to wait until the film completely entered the processor.

### Kind to your working environment

When you open the Curix 60 processor, you will notice that both the chemical tanks and the rollers are covered. Your working environment will not be disturbed by chemical fumes any more.

### Optimum replenishment

On the whole, the flow of replenishment is controlled by scanning the film surface. When the Curix 60 is used at irregular intervals, half the contents of the developing tray can be replaced by simply pressing the 'Optimising key', i.e. the black key in the middle.
