The American Energy Initiative, Part 5: Recent E.P.A. Rulemakings Relating to Boilers ..., Serial No. 112-41, April 15, 2011, 112-1 Hearing, *,2012 **Annual Energy Outlook 2012, with Projections To 2035** Energy Information Administration (U S),2012-10-04 The projections in the U S Energy Information Administration s EIA s Annual Energy Outlook 2012 AEO2012 focus on the factors that shape the U S energy system over the long term Under the assumption that current laws and regulations remain unchanged throughout the projections the AEO2012 Reference case provides the basis for examination and discussion of energy production consumption technology and market trends and the direction they may take in the future It also serves as a starting point for analysis of potential changes in energy policies But AEO2012 is not limited to the Reference case It also includes 29 alternative cases see Appendix E Table E1 which explore important areas of uncertainty for markets technologies and policies in the U S energy economy Many of the implications of the alternative cases are discussed in the Issues in focus section of this report Key results highlighted in AEO2012 include continued modest growth in demand for energy over the next 25 years and increased domestic crude oil and natural gas production largely driven by rising production from tight oil and shale resources As a result U S reliance on imported oil is reduced domestic production of natural gas exceeds consumption allowing for net exports a growing share of U S electric power generation is met with natural gas and renewables and energy related carbon dioxide emissions remain below their 2005 level from 2010 to 2035 even in the absence of new Federal policies designed to mitigate greenhouse gas GHG emissions Executive Summary p 2 [Federal Register](#) ,2013-08 [The American Energy Initiative](#) United States. Congress. House. Committee on Energy and Commerce. Subcommittee on Energy and Power,2011 *Wiring Principles of Cerebral Cortex* Julian Budd, Zoltán F. Kisvárdy,2015-11-17 Cerebral cortex is probably the most complex biological network Here many millions of individual neurons the functional units of cortex are interconnected through a massive yet highly organized pattern of axonal and dendritic wiring This wiring enables both near and distant cells to coordinate their responses and generate a rich variety of cognitions and behaviours When the wiring is damaged through disease or trauma it may reorganize but this may lead to characteristic pathological behaviours While there have been significant advances in mapping cortical connectivity the organizing principles and function of this connectivity are not well understood On the one hand there appears to be general design constraints governing cortical wiring as first recognised by R mon y Cajal s in his laws of conduction material and volume conservation Yet on the other hand particular patterns of cortical wiring exist to serve specific functions There is a wide gap in understanding how the response and connectivity properties of a single neuron contribute to emergent network functions such as in detecting perceptually relevant features Unravelling this intimate causal relationship represents one of the major challenges in neuroscience This Research Topic will examine progress in understanding cortical wiring principles This Research Topic aims to draw together recent advances in methods and understanding as well as recent challenges to

existing ideas about how cerebral cortex is wired This is particularly timely because new automated techniques may soon yield huge datasets in need of explanation Recent studies have for instance empirically evaluated R mon y Cajal s conservation laws for cerebral cortex while others have shown some unexpected connectivity features that may refine the traditional view of how corticocortical connections are organised with regard to functional representations of auditory somatosensory and visual cortices Understanding these data will help improve the fidelity of neural models of cerebral cortical function and take into account the diversity of connections at both micro and mesoscopic scales not seen at such a depth before
