Hydrogen Technology Aline Léon, 2008-07-18 Aline Leon In the last years public attention was increasingly shifted by the media and world governments to the concepts of saving energy reducing pollution protecting the environment and developing long term energy supply solutions In parallel research funding relating to alternative fuels and energy carriers is increasing on both national and international levels Why has future energy supply become such a matter of concern The reasons are the problems created by the world's current energy supply system which is mainly based on fossil fuels In fact the energy stored in hydrocarbon based solid liquid and gaseous fuels was and will be widely consumed for internal combustion engine based transportation for electricity and heat generation in residential and industrial sectors and for the production of fertilizers in agriculture as it is convenient abundant and cheap However such a widespread use of fossil fuels by a constantly growing world population from 2.3 billion in 1939 to 6.5 billion in 2006 gives rise to the two problems of oil supply and environmental degradation The problem related to oil supply is caused by the fact that fossil fuels are not renewable primary energy sources This means that since the first barrel of petroleum has been pumped out from the ground we have been exhausting a heritage given by nature
