Advanced Modelling Techniques in Structural Design Feng Fu,2015-03-26 The successful design and construction of iconic new buildings relies on a range of advanced technologies in particular on advanced modelling techniques In response to the increasingly complex buildings demanded by clients and architects structural engineers have developed a range of sophisticated modelling software to carry out the necessary structural analysis and design work Advanced Modelling Techniques in Structural Design introduces numerical analysis methods to both students and design practitioners It illustrates the modelling techniques used to solve structural design problems covering most of the issues that an engineer might face including lateral stability design of tall buildings earthquake progressive collapse fire blast and vibration analysis non linear geometric analysis and buckling analysis Resolution of these design problems are demonstrated using a range of prestigious projects around the world including the Buji Khalifa Willis Towers Taipei 101 the Gherkin Millennium Bridge Millau viaduct and the Forth Bridge illustrating the practical steps required to begin a modelling exercise and showing how to select appropriate software tools to address specific design problems **McTrans Catalog** ,1991-06 **Knowledge Based Systems for Civil and Structural Engineering** B. H. V. Topping,1993 Included in this volume are a selection of papers on the application of knowledge based systems to civil structural engineering The papers were presented at the Third International Conference on the Application of Artificial Intelligence to Civil and Structural Engineering held 17 19 August 1993 Edinburgh InfoWorld ,1985-10-21 InfoWorld is targeted to Senior IT professionals Content is segmented into Channels and Topic Centers InfoWorld also celebrates people companies and projects **Design and Analysis of Tall and Complex Structures** Feng Fu,2018-02-01 The design of tall buildings and complex structures involves challenging activities including scheme design modelling structural analysis and detailed design This book provides structural designers with a systematic approach to anticipate and solve issues for tall buildings and complex structures This book begins with a clear and rigorous exposition of theories behind designing tall buildings After this is an explanation of basic issues encountered in the design process This is followed by chapters concerning the design and analysis of tall building with different lateral stability systems such as MRF shear wall core outrigger bracing tube system diagrid system and mega frame The final three chapters explain the design principles and analysis methods for complex and special structures With this book researchers and designers will find a valuable reference on topics such as tall building systems structure with complex geometry Tensegrity structures membrane structures and offshore structures Numerous worked through examples of existing prestigious projects around the world such as Jeddah Tower Shanghai Tower and Petronas Tower etc are provided to assist the reader s understanding of the topic Provides the latest modelling methods in design such as BIM and Parametric Modelling technique Detailed explanations of widely used programs in current design practice such as SAP2000 ETABS ANSYS and Rhino Modelling case studies for all types of tall buildings and complex structures such as Buttressed Core system diagrid system
