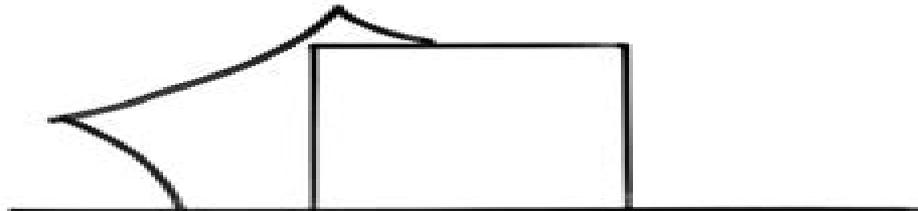

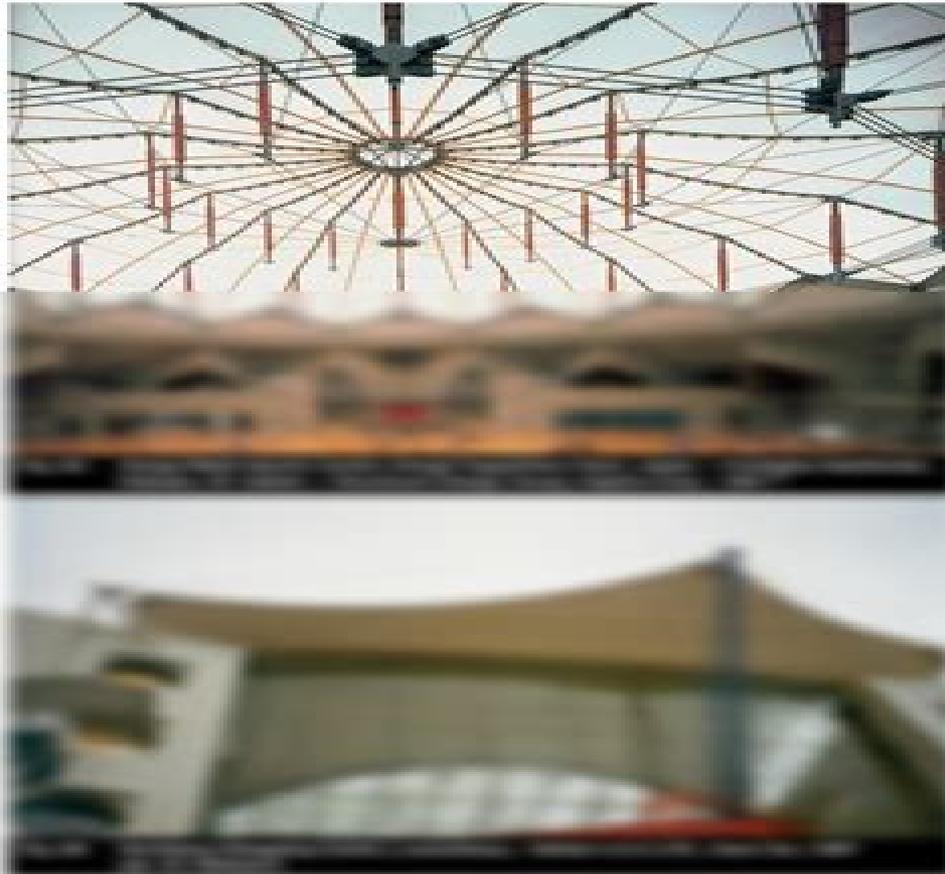

Fig. 64 Closed attached membrane construction

Membrane roofs between or on top of buildings are often used to protect areas where the level of comfort for the internal temperature is less demanding and the natural daylight is an advantage.

‘Flying’ masts support the translucent membrane roof of the Amagi Multi-Sports Centre and reinforce the impression of light as well as the lightweight character of the roof. The tensegrity roof was built without scaffolding. It was pre-assembled on the floor and attached to a temporary ring for lifting.

The combination of light and colour gives a dynamic quality to the structure and allows the introduction of other materials as well as the use of other lighting systems.

#### THE MEMBRANE

Membrane structures are built in such a way that they can be attached to a building or supported by a structure. They are flexible, light, and easy to install. They are also resistant to fire and can be used in a variety of ways. They can be used to create a variety of spaces and can be attached to a building or supported by a structure.
