

## H.E. Harris Pictorial Guide to Centering

Cat #	Very Fine	Fine	Average
1 to 293 1847 to 1899	 <p style="text-align: center;">Perfs clear of design on all four sides. Margins may not be even.</p>	 <p style="text-align: center;">Perfs well clear of design on at least three sides. But may almost touch design on one side.</p>	 <p style="text-align: center;">Perfs cut into design on at least one side.</p>
294 to 749 1901 to 1934	 <p style="text-align: center;">Perfs clear of design. Margins relatively even on all four sides.</p>	 <p style="text-align: center;">Perfs clear of design. Margins not even on all four sides.</p>	 <p style="text-align: center;">Perfs touch design on at least one side.</p>
750 to Date 1935 to Present	 <p style="text-align: center;">Perfs clear of design. Centered with margins even on all four sides.</p>	 <p style="text-align: center;">Perfs clear of design. Margins may be uneven.</p>	 <p style="text-align: center;">Perfs may touch design on at least one side.</p>

Note: Margins are the area from the edges of stamp to the design. Perfs are the serrations between stamps that aid in separating them.

### CENTERING

One major factor in the determination of a stamp's fair value is its **centering**, the relative balance of the stamp design within its margins. Whether the stamp has perforations or is imperforate, its centering can be judged. Because the stamp trade does not have an established system for grading or measuring centering, "eyebaling" has become the standard practice. As a result, one collector's definition may vary from another's. This can create some confusion, but the system seems to work, so it has remained in force. Centering can range from poor to superb, as follows:

- **Poor**—so far off center that a significant portion of the design is lost because of bad centering. On a poorly centered perforated stamp, the perforations cut in so badly that even the perf tips may penetrate the design.
- **Average**—a stamp whose frame or design is cut slightly by the lack of margins on one or two sides. On a perforated stamp, the perf holes might penetrate the stamp, but some margin white space will show on the teeth. Average stamps are accepted by the majority of collectors for 19th century stamps and early 20th century stamps, as well as for the more difficult later issues.
- **Fine**—the perforations are clear of the design, except for those issues that are known to be extremely poorly centered, but the margins on opposite sides will not be balanced, that is, equal to each other. (Note: a stamp whose top and bottom margins are perfectly balanced may still be called fine if the left and right margins differ substantially from each other.)
- **Very fine**—the opposite margins may still appear to differ somewhat, but the stamp is closer to being perfectly centered than it is to being fine centered. Very fine stamps are sought by collectors who are particularly interested in high quality and who are willing to pay the premiums such stamps command.
- **Superb**— perfect centering. They are so scarce that no comprehensive price list could attempt to include a superb category. Superb stamps, when they are available, command very high premiums.
- **"Jumbo"**—an abnormal condition, in which the stamp's margins are oversized compared to those of the average stamp in a given issue. Such jumbos can occur in the plate making process when a design is cut into the printing plate and excessive space is allowed between that design and the adjacent stamps.

Note: Some collectors also define a "fine to very fine" condition, in which the margin balance falls into a mid-range between fine and very fine. In theory it may be an attractive compromise, but in practice the range between fine and very fine is too narrow to warrant a separate intermediate category.
