_____ found in
nature. Magnets are rocks or
metals that have an
invisible field around them. They can attract
other magnets and certain metals like
iron. Many metals
are not magnetic. Silver, gold, aluminum,
and copper are non-magnetic metals. The
magnetic objects must be
close to one another to
work. Magnets have two poles on either
end of the magnet, the
north pole and the south
pole. The poles are the strongest part of
the magnet. Like poles repel.
Repel means to push apart. If you place
both south ends of a magnet near each
other, they will push apart. Opposites
attract which means to pull
together. If you place a north and a south
pole near each other they will
pull together.

Look at the arrows above the magnets and determine if they are attracting or
repelling. Write N for north or S for south to show which poles are facing each other.
