

## GEAR SELECTION

**FIG. 28** Tractor is equipped to provide eight forward gear speeds and two reverse gear speeds. Transmission shift lever 1 provides four forward gears and one reverse gear. These gear selections are accompanied by large shift force.

Shift lever 2 provides two ranges in each transmission gear speed. This lever offers most change in ground speed.

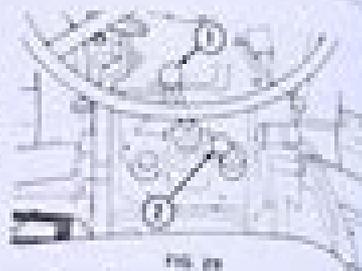

FIG. 28

**FIG. 29** Shift pattern and arrangement of gear speeds in each shift range is shown in right.

Reverse clutch pedal and parking shift lever in neutral position. Release parking brake lever and shift pedals, then slowly release clutch pedal.

Shift to desired transmission gear and/or range by depress range selector clutch and shift pedals (keeping the tractor centered on the gear and/or range) with tractor stopped.

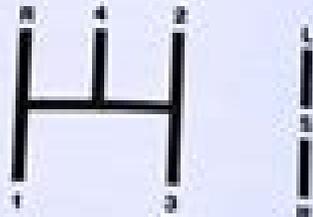

FIG. 29

**IMPORTANT:** Always check and use water before shifting large and/or transmission gear lever.

Select the gear which will give the best fuel consumption without overloading the engine. Remember that ground conditions in the same field may vary. Therefore, change gear which changes all speed relationships, and will provide some reserve power for rough work.

**IMPORTANT:** Never use the tractor in "lipping" the clutch and avoid "riding" the clutch pedal. This will cause premature and normal clutch failure.

**CAUTION:** Never coast down slopes with the clutch disengaged (pedal depressed) or other lever is raised.

DRIVING RANGE 2

Range	R	12.08	8.13

\*The vehicle's transmission gear is marked RPM 2000 (calculated from engine rotation of 2000) and the corresponding vehicle in 14.9 MPH in full throttle.

## BRAKE USAGE

**FIG. 31** Brake pedals 1 and 2 may be used independently or one applied to assist in slowing or stopping when used in the listed sequence. Release every pedal and use as required to slow and stop.

When tractor is equipped for fully loaded or higher use of speed brake pedals must be locked together with lock 2 and tractor will stop immediately.

**CAUTION:** Do not use one wheel braking at high speed. Always lock brake pedals together when tractor is being transported. Make sure tractor is attached evenly.

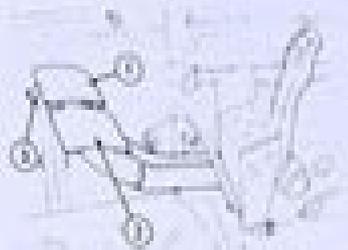

FIG. 31

## DIFFERENTIAL LOCK

**FIG. 32** Differential lock pedal 1 should only be depressed when required as effectiveness of the steering is greatly reduced. To engage differential lock, depress clutch pedal and allow all rear wheel speed to drop to zero. Carefully depress lock pedal and allow rear wheel to engage the chain.

When further use of differential lock is not required, release differential lock pedal. Pedal should normally return to the "off" position. On tractor the differential lock pedal has return spring operation after foot is removed from pedal due to spring difference between front wheels. In the case where clutch pedal and foot are both depressed while tractor is in motion to release the pedal.

**IMPORTANT:** Do not engage differential lock while wheel spinning. Normal steering change will result.
