1. The diagram shown represents four waves traveling to the right in the same transmitting medium.

Which type of wave is represented?

- A. elliptical                      B. longitudinal  
C. torsional                      D. transverse

2. Within a vacuum, the property common to all electromagnetic waves is their

- A. amplitude                      B. frequency  
C. wavelength                      D. velocity

3. The diagram shown represents four waves traveling to the right in the same transmitting medium.

Which wave has the greatest frequency?

- A. A                      B. B                      C. C                      D. D

4. Which wave has the greatest amplitude?

- A. A                      B. B                      C. C                      D. D

5. Which characteristic is determined by the source of a wave train and will not change when the wave passes into another medium?

- A. frequency                      B. wavelength  
C. velocity                      D. amplitude

6. The pattern shown was recorded by a tape timer. The space between the dots represents 0.02 second. What is the frequency of the timer?

- A. 0.02 cycle/sec  
B. 5 cycles/sec  
C. 50 cycles/sec  
D. 500 cycles/sec

7. Which waves require a medium for transmission?

- A. light waves                      B. radio waves  
C. sound waves                      D. cosmic waves

**Mathematical Biology** James D. Murray, 2013-03-09 Mathematical biology the use of mathematical ideas and models in the biosciences is a fast growing very exciting and increasingly important interdisciplinary field This textbook is an account of some of the major techniques and models used and of some genuine practical applications drawn from current areas of research interest in for example population ecology developmental biology physiology epidemiology and evolution It provides the reader with a thorough background sufficient to start genuine interdisciplinary collaborative research with biomedical scientists

*Solitons In Action* Karl Lanngren, 2012-12-02 Solitons in Action is a collection of papers that discusses the concept of a wave packet or pulse known as a soliton One paper reviews the development of the solitary wave concept with emphasis on the difference between a solitary wave and a soliton The Korteweg de Vries KdV equation shows the interactions between infinite sets of conservation laws and the inverse scattering transform method The Backlund transform technique produces hierarchies of multisoliton solutions for nonlinear wave equations The Gel'fand Levitan algorithm can effect an inverse scattering calculation that relates changes in the scattering data to changes in the solution of corresponding wave equation One paper points out that concepts in differential geometry can show the fundamental nature of soliton behavior and the relationship between inverse scattering and the Backlund transformation Solitons in action can be viewed as magnetic flux propagates through a gap between two closely spaced superconductors in quantum units This view results in a simplified procedure for perturbation expansions around multisoliton solutions This collection can prove useful for researchers involved in the study of fluid mechanics of pure and applied sciences of mathematical sciences and of wave theory

**Introductory Physics for the Life Sciences** Simon Mochrie, Claudia De Grandi, 2023-04-05 This classroom tested textbook is an innovative comprehensive and forward looking introductory undergraduate physics course While it clearly explains physical principles and equips the student with a full range of quantitative tools and methods the material is firmly grounded in biological relevance and is brought to life with plenty of biological examples throughout It is designed to be a self contained text for a two semester sequence of introductory physics for biology and premedical students covering kinematics and Newton's laws energy probability diffusion rates of change statistical mechanics fluids vibrations waves electromagnetism and optics Each chapter begins with learning goals and concludes with a summary of core competencies allowing for seamless incorporation into the classroom In addition each chapter is replete with a wide selection of creative and often surprising examples activities computational tasks and exercises many of which are inspired by current research topics making cutting edge biological physics accessible to the student
