This text has been written for the new and experienced OneWorld professionals who need to use and get the most from the Object Management Workbench (OMW). It provides the fundamentals and details behind the business and technical information about OMW, alongside practical advice and special sections containing proven tips and recommendations for

Now there's a language and notation independent guide to capturing architecture so it can be used successfully by every analyst, software designer and developer. The authors review the diverse goals and uses of software architecture documentation providing documentation strategies for several common scenarios. They identify the basic unit of software architecture documentation: the viewtype which specifies the type of information to be provided in an architectural view. For each viewtype: Modules, Component and Connectors and Allocation they offer detailed guidance on documenting what really matters. Next they demonstrate how to package architecture documentation in coherent, usable form augmenting architectural views with documentation of interfaces and behavior accounting for architectural variability and dynamic systems and more. IEEE ... Electronicom, 1985 **Documentation Abstracts**, 1993 **Interfacing Between Lawyers and Computers: An Architecture for Knowledge-Based Interfaces to Legal Databases** Luuk Matthijssen, 1999-03-24 As information is both the source and the product of all legal work, legal practitioners are crucially dependent on good access to legal information. The legal databases that are currently available to store and retrieve statutes, judicial decisions and legal literature however often pose problems to the users with the effect that they cannot find the information they need. To a large extent these problems can be attributed to the limitations of the traditional Boolean query mechanism used in text databases which is difficult for users to operate. As a possible solution for these problems in this book an architecture is proposed for an intelligent interface to legal databases. An intelligent interface uses knowledge of the task domain of legal practitioners to operate as an intelligent intermediary between the user and the database. *Interfacing between Lawyers and Computers* addresses the most pressing issues that need to be resolved to allow for the development of advanced user friendly legal databases. It involves a study into the nature of legal information handling and the representation of legal knowledge. In addition to the theoretical study it is demonstrated with the development of a prototype how the architecture can be used for the development of practical legal information retrieval systems. The results of these studies are interpreted to discuss a number of possible applications for the intelligent interface architecture including the publication of government information and the organisation of legal information on the Internet. **Proceedings of the 1997 ACM SIGMOD International Conference on Management of Data** Joan M.
