Works of Yakov Borisovich Zeldovich, Volume I Yakov Borisovich Zeldovich, 2014-07-14 Selected Works of Ya B

Zeldovich is a two volume collection of over 100 articles spanning half a century of work by the late Soviet scientist Yakov Borisovich Zeldovich. The breadth and depth of Zeldovich's work is staggering. Author of over twenty books and more than 500 scientific articles, he made fundamental contributions in chemical catalysis and kinetics, combustion and the hydrodynamics of explosive phenomena, nuclear chain reactions and nuclear energy, the physics of elementary particles and the large scale structure of the universe and cosmology. The importance of this collection lies not only in its documentary value as a collection of key scientific works by a man whose genius was characterized by the Soviet physicist Andrei Sakharov as probably unique. Zeldovich himself considered his most valuable role to be that of a teacher to convey to young scientists the how of science. The author of several excellent textbooks on topics ranging from elementary mathematics to advanced methods of mathematical physics, he saw this collection of works enlarged from the original Russian edition as a contribution to that end. Here one can see the scientific method at work and all the enthusiasm, the breakthroughs and the mistakes associated with real scientific endeavor. Commentaries by the author and the editors are included with each paper serving to enhance both the historical and the pedagogical value of this edition. Originally published in 1992, The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905.

Elements of Gasdynamics H. W. Liepmann, A. Roshko, 2013-04-09. First rate text covers thermodynamics, one dimensional gas dynamics and one dimensional wave motion, waves in supersonic flow, flow in ducts and wind tunnels, methods of measurement, the equations of frictionless flow, small perturbation theory and more.

GAS DYNAMICS, EIGHTH EDITION RATHAKRISHNAN, E., 2026-01-31. The book continues to provide the most accessible and readable approach to the study of all the vital topics and issues associated with gas dynamic processes. At every stage the physics governing the process, its applications and limitations are discussed in detail. The elegant and concise style of the book along with illustrations and worked out examples makes it eminently suitable for self study by students and also for scientists and engineers working in the field of gas dynamics in industries and research laboratories. The computer program to calculate the coordinates of the contoured nozzle with the method of characteristics has been given in C language. The program listing along with a sample output is provided in the Appendix. In this revised and updated eighth edition the language of the entire book has been revised to make the text impressive. Some solved examples and exercise problems using the shock theory which would be of value to the students not only in their courses but also to their success in competitive examinations are added. A list of exercise problems with answers added to Chapter 16 will be of value to students to be successful in their course.

KEY FEATURES Concise coverage of the thermodynamic concepts to serve as a revision of the background material.
