

Follow-Up Quiz to Rational Function Match

Before the rational card match it is best to review the basic transformations of the simplest rational functions:

$$f(x) = \frac{1}{x}$$

$$f(x) = -\frac{1}{x}$$

$$f(x) = \frac{1}{x^2}$$

$$f(x) = -\frac{1}{x^2}$$

$$f(x) = d \pm \frac{1}{x-c}$$

Emphasize the **general form** of the equations used in the card match

$$f(x) = EBA \pm \frac{1}{x-c_1} \dots \pm \frac{1}{(x-c_n)^2} \dots$$

After students complete the **Rational Function Match** each student should receive one of the four versions of the follow-up quiz to complete individually and without the use of a calculator. Students should be able to identify the end behavior asymptote (specific), the vertical asymptotes and holes and write an equations in the general form

The following four versions labeled "a (blue), b (pink), c (yellow), and d (green)" I copied on to colored paper and laminated enough for a classroom set to be reused. Students received a half-sheet of the same color paper with an answer grid on the front and the "True/False" and "Sometimes/Always/Never" questions on the back.

Written in a conversational tone it incorporates reading questions throughout the text to guide the students in their reading. Linear, exponential, logarithmic, periodic and power functions are introduced early.

in the text allowing the rest of the text to be organized around mathematical concepts rather than types of functions Drawing on their experience working on their National Science Foundation grant funded PROJECTS FOR PRECALCULUS the authors incorporated input from many instructors who piloted the materials to create PRECALCULUS A STUDY OF FUNCTIONS AND THEIR APPLICATIONS *A Graphical Approach to Precalculus* E. John Hornsby, Margaret L. Lial, 1999 This book is the culmination of many years of teaching experience with the graphing calculator In it the authors treat the standard topics of precalculus solving analytically confirming graphically and motivating through applications Throughout the first five chapters the authors present the various classes of functions studied in a standard precalculus text Chapter One introduces functions and relations using the linear function as the basis for the presentation In this chapter the authors introduce the following approach which is used throughout the next four chapters after introducing a class of function the nature of its graph is examined then the analytic solution of equations based on that function is discussed Students are then shown how to provide graphical support for solutions using a graphing calculator Having established these two methods of solving equations the authors move on to the analytic methods of solving the associated inequalities Students then learn how the analytic solutions of these inequalities can also be supported graphically Finally once the student has a feel for the particular class of function under consideration the authors use analytic and graphical methods to solve interesting applications involving that function By consistently using this approach with all the different classes of functions students become aware that the authors are always following the same general procedure and just applying that procedure to a new kind of function Throughout the text the authors emphasize the power of technology but provide numerous warnings on its limitations the authors stress that it is only through understanding the mathematical concepts that students can fully appreciate the power of graphing calculators and use technology appropriately **A Graphical Approach to Precalculus** E.
