Part 1

1 Model answer

The two texts deal with the issue of what constitutes a work of art, but look at the issue from two quite different perspectives. The first text seeks to provide a definition of the term 'work of art' and begins by suggesting that anything created by a human being has the potential to be considered one. But the text then goes on to suggest that objects created by hand, which are therefore unique in themselves, may have more inherent artistic value than objects which are designed and then produced on a large scale for mass consumption.

I would take issue with this contention because so many creations which are clearly 'works of art' are also widely available. A Jane Austen novel is unequivocally a work of art, but the term can be applied to any copy you might read – even one delivered online to your e-reader. The same, surely, must go for the coffee pot the writer mentions?

The second text is more contentious. It calls into question the integrity of certain modern artists, suggesting that their work does not have true artistic value, and that gullible patrons are hoodwinked into paying large sums for works that are not even well executed. I think this is unfair. The fact that modern art is often ground-breaking, challenging our very ideas of what art is, provokes this sort of reaction in people, and this is perhaps to the artist's credit. What's more, if enough people agree that a work has artistic value, then it will command a high price, and this has always been the case.

Clearly, what constitutes a work of art will always be, to a certain extent, in the eyes of the beholder.

Doing research on the Internet often makes me feel like a sailor in a little boat adrift on a sea of information. An Internet search yields a wealth of varying data and explanations, and it's all too easy to lose your bearings and find yourself in a place at some considerable distance from your starting-point, where you can become side-tracked and waste a lot of valuable time, and sometimes even money. To give a very banal example, when searching for information about what constitutes a healthy diet, I came across all manner of information regarding essential vitamins and minerals – including the dire consequences of not getting enough of them. Before I knew what was happening, I found myself the proud owner of a five-year supply of supplements I never knew I needed – and on reflection perhaps don't need after all.

So, if you're researching a particular topic, you need some sort of criteria to help you sift through the masses of information online. Bear in mind that nobody may have verified the content of a site before it's made public and, as a researcher, it's your job to evaluate what you locate, in order to determine whether it suits your needs and also whether it's reliable. Going to a reputable site can save you a lot of time.

This was brought home to me when I was considering attending a university in the UK and needed certain precise details about the language requirements. An Internet search took me straight to my local Broth Council website, which provided me with all the information I needed.
