Language Descriptions With Integrated Text and Examples Vibhu O. Mittal, 2022-11-30 This book discusses issues in generating coherent effective natural language descriptions with integrated text and examples This is done in the context of a system for generating documentation dynamically from the underlying software representations Good documentation is

critical for user acceptance of any complex system Advances in areas such as knowledge based systems natural language and multimedia generation now make it possible to investigate the automatic generation of documentation from the underlying knowledge bases This has several important benefits it is always accessible it is always current because the documentation

reflects the underlying representation and it can take the communication context such as the user into account The work

described in this book compiles results from cognitive psychology and education on effective presentation of examples as

well as work on computational generation of examples from intelligent tutoring systems It also takes into account

computational learning from examples and a characterization of good examples for just this purpose Issues arising from

these research areas as well as issues coming from the author s own corpus analysis of instructional and explanatory texts

are discussed in the context of generating natural language descriptions of software constructs A text planner is used for a

hierarchy of communicative goals Examples are treated as an integral part of the planning process and their interaction with

text is represented at all stages The strengths and limitations of this approach are also discussed Although the focus of this

book is the generation of natural language descriptions a similar set of issues need to be addressed in the generation of

multimedia descriptions This book will be of interest to all researchers working in the areas of natural language interfaces
