

The Great Australian Rabbit Disaster

In the 19th century, settlers from Europe came in droves to this "new wonderful land", Australia. The settlers brought with them many customs from home. One of those customs was rabbit hunting; but unfortunately, Australia did not have any native rabbit species. So in 1859, a European land owner name Thomas Austin imported 24 wild rabbits from England and released them onto his land outside the town of Winchelsea, Victoria. With few rabbit predators and diseases, the rabbits reproduced prolifically. Within only 30 years, the original 24 rabbits had reproduced exponentially to millions and inhabited the states of Victoria, South Wales, and portions of Queensland and South Australia. Large areas of once relatively fertile landscapes were soon transformed into dry areas that became increasingly prone to topsoil loss and drought. In subsequent decades and throughout the majority of the 20th Century, rabbits have migrated to all corners of Australia and now inhabit even the most unlikely areas.

Since the introduction of rabbits to Australia, the surrounding wildlife has been greatly affected including farm livestock populations. It was estimated in 1936 that the extermination of the rabbit population in New South Wales would liberate enough land to accommodate twelve to twenty million more sheep. In addition to effects on livestock, adverse effects were also placed upon other traditional prey species. Soon after the introduction of rabbits, Australian authorities realized they had a problem, so they introduced European foxes into the environment. The authorities thought that since foxes naturally prey on rabbits, they would be the perfect solution to the rabbit problem. However, the foxes seemed to take advantage of their relatively exotic surroundings and turned their attention to easier caught prey including rare ground birds, indigenous marsupials, and rodents. The only remaining semi-natural enemy of the rabbit population in Australia is now the dingo (a free-roaming wild dog). However, in the early 20th Century, dingos were frequently slaughtered due to their aggressive carnivorous habits towards farmers' livestock. Without a traditional predator/prey environment, the rabbits were left to an uninhibited lifestyle.

In the last 150 years, Australia has tried many methods to halt the spreading rabbit population. The legislature even passed laws that, among other things, required landowners to trap, poison or kill rabbits on their property. Because of the enormous numbers of rabbits, every attempt to cut down the rabbit population was doomed to failure. After World War II, Australia declared war on the rabbits and released a deadly virus that was 99.8% effective at killing them. At last Australians thought they had discovered the "magic bullet". However, the 0.2% of the rabbit population that survived was immune to the virus. As the immune rabbits reproduced, they passed on the immunity to their offspring, and the new immune rabbit population ballooned into the millions. It seems that Australians are destined to live with millions of rabbits for quite some time.

The Great Australian Rabbit Disaster

Answer the following questions on your own or with a partner in full sentences. Each person should write down the answers.

1. Why were rabbits introduced to Australia in the first place?
2. Why were the rabbits able to reproduce so quickly?
3. Describe how rabbits have negatively affected:
 - a. the land
 - b. farm livestock populations and other wild herbivores
4. Why was introducing foxes ineffective at quelling the rapidly-growing rabbit population? (Why didn't it work?)
5. In Australia, there was only one wild animal that preyed on rabbits. What was it and why was it not able to control the growing rabbit population?
6.
 - a. Why did the anti-rabbit virus seem to be an answer to Australia's rabbit problem?
 - b. Why didn't it work?
7. Read p. 93-94 in your textbook, and describe the three types of measures for controlling invasive species.
8. You have been hired as an ecologist to come up with a solution to Australia's rabbit problem. Describe your solution. Your plan should attempt to:
 - a. Prevent rabbits from migrating into new areas
 - b. Reduce the current population of rabbits in areas they already inhabit.

Across the world animals are being domesticated at an unprecedented rate and scale But what exactly is domestication and what does it tell us about ourselves In this book Marcus Baynes Rock seeks the common thread linking stories about the domestication of Australia s native animals arguing that domestication is part of a process by which late modernity threatens to undo the world In a deeply personal account the author tells of his encounters with crocodiles and emus behind fences dingoes and kangaroos crossing boundaries and native bees producing honey in his suburban backyard Drawing on comparisons between Aboriginal and colonial Australians Baynes Rock reveals how the domestication of Australia s fauna is a process of unmaking As an extension of late modernity the connections that tie humans and other animals to wider ecologies are being severed threatening to isolate us and our domesticates from the rest of the world It is here that Baynes Rock reveals a key difference between Aboriginal and colonial Australian modes of landscape management while one is focused on a systemic approach and sees humans as integral to ecological integrity the other seeks to sever domesticates from ecological processes The question that emerges is How might we reconfigure and maintain these connections without undoing humanity Written in the author s characteristically frank passionate and humorous style *Crocodile Undone* takes the reader on a journey across both physical and philosophical landscapes This fascinating narrative will appeal to anyone interested in the vital connections between humans and animals ENGLISH Today 1 ,1990 Australian Fisheries ,1975
