Human Karyotyping Packet:

Pattern Recognition Theory and Applications J. Kittler, V.W. Fu, L.F. Pau, 2012-12-06 This book is the outcome of the successful NATO Advanced Study Institute on Pattern Recognition Theory and Applications held at St Anne's College Oxford in April 1981. The aim of the meeting was to review the recent advances in the theory of pattern recognition and to assess its current and future practical potential. The theme of the Institute, the decision-making aspects of pattern recognition with the emphasis on the novel hybrid approaches and its scope, a high-level tutorial coverage of pattern recognition methodologies counterpointed with contributed papers on advanced theoretical topics and applications are faithfully reflected by the volume. The material is divided into five sections: 1. Methodology, 2. Image Understanding and Interpretation, 3. Medical Applications, 4. Speech Processing and Other Applications, 5. Panel Discussions. The first section covers a broad spectrum of pattern recognition methodologies including geometric, statistical, fuzzy set, syntactic, graph-theoretic, and hybrid approaches. Its coverage of hybrid methods places the volume in a unique position among existing books on pattern recognition. The second section provides an extensive treatment of the topical problem of image understanding from both the artificial intelligence and pattern recognition points of view. The two application sections demonstrate the usefulness of the novel methodologies in traditional pattern recognition application areas. They address the problems of hardware/software implementation and of algorithm robustness, flexibility, and general reliability. The final section reports on a panel discussion held during the Institute.

Image Processing and Analysis ,1999-12-09 A wide range of books on image processing and analysis provide comprehensive descriptions of mathematics and algorithms for image processing practitioners or introductory material for engineering students This volume is different in addressing the topic from the point of view of the user Standard algorithms procedures and rules of thumb are explained in the context of successful application to biological or medical images Early chapters cover the basic topics of image acquisition processing analysis and pattern recognition Much of the explanation is in the form of protocols which should equip the user in the biological or earth sciences with the background for informed use of image processing software and sufficient knowledge to write their own programmes if they feel moved to do so More advanced techniques in the use of explicit models and analysis of 3D images are covered in later chapters also with reference to specific applications The coverage of these is not exhaustive but may inspire the reader to consider applying image analysis to problems beyond those tackled by commercial packages
