  100 Top Internet Job Sites Kristina M. Ackley,2000 Going beyond listing popular job posting sites this book also helps career seekers explore Internet opportunities for career assessment networking and company research *The Psychology of Magic and the Magic of Psychology* Amir Raz,Jay A. Olson,Gustav Kuhn,2016-11-18 Magicians have dazzled audiences for many centuries however few researchers have studied how let alone why most tricks work The psychology of magic is a nascent field of research that examines the underlying mechanisms that conjurers use to achieve enchanting phenomena including sensory illusions misdirection of attention and the appearance of mind control and nuanced persuasion Most studies to date have focused on either the psychological principles involved in watching and performing magic or neuromagic the neural correlates of such phenomena Whereas performers sometimes question the contributions that modern science may offer to the advancement of the magical arts the history of magic reveals that scientific discovery often charts new territories for magicians In this research topic we sketch out the symbiotic relationship between psychological science and the art of magic On the one hand magic can inform psychology with particular benefits for the cognitive social developmental and transcultural components of behavioural science Magicians have a large and robust set of effects that most researchers rarely exploit Incorporating these effects into existing experimental even clinical paradigms paves the road to innovative trajectories in the study of human behaviour For example magic provides an elegant way to study the behaviour of participants who may believe they had made choices that they actually did not make Moreover magic fosters a more ecological approach to experimentation whereby scientists can probe participants in more natural environments compared to the traditional lab based settings Examining how magicians consistently influence spectators for example can elucidate important aspects in the study of persuasion trust decision making and even processes spanning authorship and agency Magic thus offers a largely underused armamentarium for the behavioural scientist and clinician On the other hand psychological science can advance the art of magic The psychology of deception a relatively understudied field explores the intentional creation of false beliefs and how people often go wrong Understanding how to methodically exploit the tenuous twilight zone of human vulnerabilities perceptual logical emotional and temporal becomes all the more revealing when top down influences including expectation symbolic thinking and framing join the fray Over the years science has permitted magicians to concoct increasingly effective routines and to elicit heightened feelings of wonder from audiences Furthermore on occasion science leads to the creation of novel effects or the refinement of existing ones based on systematic methods For example by simulating a specific card routine using a series of computer stimuli researchers have decomposed the effect and reconstructed it into a more effective routine Other magic effects depend on meaningful psychological knowledge such as

which type of information is difficult to retain or what changes capture attention Behavioural scientists measure and study these factors By combining analytical findings with performer intuitions psychological science begets effective magic Whereas science strives on parsimony and independent replication of results magic thrives on reproducing the same effect with multiple methods to obscure parsimony and minimise detection This Research Topic explores the seemingly orthogonal approaches of scientists and magicians by highlighting the crosstalk as well as rapprochement between psychological science and the art of deception **Job Searching Online For Dummies** Pam Dixon,2000-01-31 Not just a book of searching sites and sources online this book helps readers use computers and the Internet to make the most out of finding new employment CD contains software necessary for connecting to a selected online service and templates for building an effective online resume Communicating for Results Cheryl Hamilton,Cordell Parker,2001 This best selling introduction to the basic concepts and techniques needed to communicate successfully in today s business world is designed to improve the communication skills of entry level managers and employees and to serve as a reference for experienced professionals who wish to refresh or update their communication skills Separate chapters on the communication process organizational theory and culture and interpersonal communication theory form the foundation for later discussions of critical listening nonverbal communication and obstacles to organizational communication Two chapters are devoted to interviewing and two chapters examine small groups and leadership processes Four final chapters offer guidance in informative and persuasive presentations including full chapter coverage on language and delivery and full chapter coverage on the use of visual aids **.
