

Human Inheritance Lab

Objectives

To determine phenotypic characteristics and genotypes for human inheritable traits.
To determine the frequency (%) of dominant and recessive trait in population.

Materials

Index

Procedure

Obtain the phenotypic characteristics and the corresponding gene genotypes for the traits listed below:

- In the first row of the lab table 1, list the 27 characteristics below. Then make sure that the dominant phenotype and the recessive phenotype for that trait are the same for mating.
- In the corresponding row of table 1, write your phenotypes and determine its dominance or recessive.
- In the third column of table 1, write your possible genotype for each genotype.

Questions

- If you show the recessive trait, then you must be homozygous recessive.
- If you show dominant trait, you may be heterozygous/dominant or homozygous for that trait.
 - If one of your parents shows the recessive trait, then you must have passed on a gene for the recessive trait, and you must be heterozygous for that trait.
 - If neither of your parents shows the recessive trait, you may not know if you are heterozygous or homozygous dominant for that trait. In that case, you **may** provide genotypes (heterozygous and homozygous dominant).

*** If you need help, you may ask your parents about their traits. * Do not tell your parents that

you are doing a lab. If your parents get involved they will tell you your parents, please give **your** possible genotypes for dominant/dominant gene.
