The Flip Side Professor Stuart Christie, 2024-12 Benefiting from recently catalogued archival materials *The Flip Side Old China Hands and the American Popular Imagination 1935 1985* evaluates the influence of an ensemble of well known Americans born or bred in China Pearl S Buck Henry R Luce Owen Lattimore and John Hersey after their return to the United States of America The children of missionaries and others serving China all contributed in significant ways to the globalisation of the American ideal in the 20th century even as each sought in different roles as

publishers as novelists as scholars to centre Chinese values and concerns in the anglophone public sphere As Chinese ideas and values met the projection of American soft power and governmentality a uniquely bilateral global imaginary arose wherein respect for China as an emerging force encountered Western reaction For these old China hands the return to the USA resulted in unique and differing sociocultural formations Buck s intersectional literary populism on behalf of the Chinese people Henry R Luce s press internationalism Lattimore s inner Asian regional imaginaries and Hersey s China trilogy allegories All were keen observers of and participants in international networks combining a diversity of China based expertise and resources that continued to inform their everyday work at a great distance Both public and private these networks onshore and off enabled and energised their own advocacy that dared to imagine a Chinese future distinct from its colonial or semi feudal past The Flip Side asserts that these American stakeholders occupied a transitional but crucial role in the rise of China in Western imagination prior to China s assertion of sovereignty over its own global role and message

Criticality as a signature of healthy neural systems: multi-scale experimental and computational studies Paolo Massobrio, Lucilla de Arcangelis, Valentina Pasquale, Henrik Jeldtoft Jensen, Dietmar Plenz, 2015-05-08 Since 2003 when spontaneous activity in cortical slices was first found to follow scale free statistical distributions in size and duration increasing experimental evidences and theoretical models have been reported in the literature supporting the emergence of evidence of scale invariance in the cortex Although strongly debated such results refer to many different in vitro and in vivo preparations awake monkeys anesthetized rats and cats in vitro slices and dissociated cultures suggesting that power law distributions and scale free correlations are a very general and robust feature of cortical activity that has been conserved across species as specific substrate for information storage transmission and processing Equally important is that the features reminiscent of scale invariance and criticality are observed at scale spanning from the level of interacting arrays of neurons all the way up to correlations across the entire brain Thus if we accept that the brain operates near a critical point little is known about the causes and or consequences of a loss of criticality and its relation with brain diseases e g epilepsy The study of how pathogenetical mechanisms are related to the critical non critical behavior of neuronal networks would likely provide new insights into the cellular and synaptic determinants of the emergence of critical like dynamics and structures in neural systems At the same time the relation between the impaired behavior and the disruption of criticality would help clarify its role in normal brain function The main objective of this Research Topic is to investigate the emergence disruption of the emergent critical like states in healthy impaired neural systems Birth controlled Amrita Pande, 2022-06-14 Birth controlled analyses the world of selective reproduction the politics of who gets to legitimately reproduce the future through a cross cultural analysis of three modes of controlling birth contraception reproductive violence and repro genetic technologies It argues that as fertility rates decline worldwide the fervour to control fertility and fertile bodies does not dissipate what evolves is the preferred mode of control Although new technologies like those that assist conception or allow genetic selection may appear to be an antithesis of other violent versions of population control this book demonstrates that both are part of the same continuum All population control policies target and vilify women Black women in particular and coerce them into subjecting their bodies to state and medical surveillance Birth controlled argues that assisted reproductive technologies and repro genetic technologies employ a similar and stratified burden of blame and responsibility based on gender race class and caste To empirically and historically ground the analysis the book includes contributions from two postcolonial nations South Africa and India examining interactions between the history of colonialism and the economics of neoliberal markets and their influence on the technologies and politics of selective reproduction The book provides a critical interdisciplinary and cutting edge dialogue around the interconnected issues that shape reproductive politics in an ostensibly post population control era The contributions draw on a breadth of disciplines ranging from gender

studies sociology medical anthropology politics and science and technology studies to theology public health and epidemiology facilitating an interdisciplinary dialogue around the interconnected modes of controlling birth and practices of neo eugenics

The Evolution of the Unconscious Susan Long, 2025-02-12 Drawing on over four decades of professional and academic experience Susan Long explores how the concept of the unconscious has evolved from the nineteenth to the twenty first century showing that it is more than an individual phenomenon but also a group organisational and institutional phenomena Each chapter examines theories that use the idea of the unconscious first covering the work of Schelling Freud Bion and Lacan After examining traditional psychoanalytic ethos the author takes a look at the mid twentieth century extension of the meaning of the unconscious towards the social field Here she explores three main traditional categories of approaches the Neo Freudians the Frankfurt School and social scientists historians and anthropologists The book also covers the idea of approaching the unconscious from the perspective of the neurosciences as well as its connections with nature showing a broader more cosmic view of the unconscious in nature and the universe Lastly Long looks at how we might understand today s organisations and society through the lens of the changing ideas presented throughout the book Broad sweeping and accessible this book is a valuable resource for organisational psychologists consultants and managers exploring psychoanalytic and socioanalytic approaches as well as those in academic settings wanting to pursue an interest in the unconscious

Emotion and Aging: Recent Evidence from Brain and Behavior Natalie Ebner, Håkan Fischer, 2015-05-05 Emotions play a central role in every human life from the moment we are born until we die They prepare the body for action guide decisions and highlight what should be noticed and remembered Since emotions are central to daily functioning and well being it is important to understand the extent to which aging affects the perception of attention to memory for as well as experience and regulation of emotions An early scientific view of how people s emotions are affected by aging argued that aging led to a deterioration of emotional function This theory represented by for example Carl Jung 1875 1961 claimed that old age is a period of life when people feel an increased emotional sameness and less emotional energy According to this scientific view the aging emotional landscape was bleached barren and flattened Current psychological research however shows that emotion is rather a psychological domain that is relatively unaffected by the aging process or even improves with age in contrast to most cognitive functions For example even though there is evidence that aging is associated with deficits in emotion recognition various emotional functions seem to remain intact or become better with age such as the ability to regulate one s emotions or the extent of experiencing positive emotions However more research is needed to determine brain and behavior related quantitative and qualitative age related changes of different aspects of emotion processing and emotional functioning In the current Frontiers research topic we aim to present exciting new findings related to the effects of healthy aging on both more perceptually driven bottom up as well as

more cognitively driven top down aspects of emotions In particular questions such as the following need to be raised and addressed What neural and behavioral processes are underlying age differences in emotion perception and memory for emotional information Are there differences between how older and younger adults experience and regulate their emotions and what drives these differences Is there a gradual reduction or more of a qualitative change of our emotional experiences over the life cycle from the turbulent childhood and youth to the mellower old age And what aspects of age related changes in emotional processing can be explained by age related changes in the brain and which are more affected by other factors such as changes in other body systems in experiential processes or in overall life goals
