

Activity 3.5 Linear Dimensions Answer Key

Purpose

If you were given the responsibility of going to a store and purchasing a throw rug that had to fit within a room in your home, how would you communicate the shape and size of the room to the salesperson?

Given the sketching skills that you've developed, you would probably sketch a top view of the room on a piece of paper. This would be useful, but a sketch alone only communicates shape information.

A shape has a size that must be communicated in order to make intelligent design decisions. Information about an object's size must be conveyed using dimensions. In manufacturing, a part must be dimensioned fully and correctly and to the proper precision. Otherwise, the part may not function properly or may not fit into an assembly as intended. Dimensioning errors can lead to a delay in production time, increased design and manufacturing costs, and a potentially unsafe product.

In this activity, you will apply your knowledge of dimensioning to identify dimensioning errors and provide missing dimensions on multi-view drawings. You will also fully dimension multi-view sketches according to dimensioning guidelines.

Equipment

- Number 2 pencil with eraser
- Engineer's notebook
- Inch scale or ruler

Procedure

Identify dimensioning errors based on the Dimensioning Guidelines. Circle each error and place a letter, **A** through **P**, next to each error on the drawing. In the space provided below each drawing, next to the appropriate letter, cite the dimensioning guideline that is misapplied and give the reason for each correction.
