Exploring Mathematical Modeling in Biology Through Case Studies and Experimental Activities Rebecca Sanft, Anne Walter, 2020-03-30 Exploring Mathematical Modeling in Biology through Case Studies and Experimental Activities provides supporting materials for courses taken by students majoring in mathematics computer science or in the life sciences The book s cases and lab exercises focus on hypothesis testing and model development in the context of real data The supporting mathematical coding and biological background permit readers to explore a problem understand assumptions and the meaning of their results The experiential components provide hands on learning both in the lab and on the computer As a beginning text in modeling readers will learn to value the approach and apply competencies in other settings Included case studies focus on building a model to solve a particular biological problem from concept and translation into a mathematical form to validating the parameters testing the quality of the model and finally interpreting the outcome in biological terms The book also shows how particular mathematical approaches are adapted to a variety of problems at multiple biological scales Finally the labs bring the biological problems and the practical issues of collecting data to actually test the model and or adapting the mathematics to the data that can be collected Presents a single volume on mathematics and biological examples with data and wet lab experiences suitable for non experts Contains three real world biological case studies and one wet lab for application of the mathematical models Includes R code templates throughout the text which are also available through an online repository along with the necessary data files to complete all projects and labs *Resources in Education* ,1974 **Research in Education** ,1974 **Subject Guide to Books in Print** ,2001 **A Biologist's Guide to Mathematical Modeling in Ecology and Evolution** Sarah P. Otto, Troy Day, 2011-09-19 Thirty years ago biologists could get by with a rudimentary grasp of mathematics and modeling Not so today In seeking to answer fundamental questions about how biological systems function and change over time the modern biologist is as likely to rely on sophisticated mathematical and computer based models as traditional fieldwork In this book Sarah Otto and Troy Day provide biology students with the tools necessary to both interpret models and to build their own The book starts at an elementary level of mathematical modeling assuming that the reader has had high school mathematics and first year calculus Otto and Day then gradually build in depth and complexity from classic models in ecology and evolution to more intricate class structured and probabilistic models The authors provide primers with instructive exercises to introduce readers to the more advanced subjects of linear algebra and probability theory Through examples they describe how models have been used

to understand such topics as the spread of HIV, chaos, the age structure of a country, speciation and extinction. Ecologists and evolutionary biologists today need enough mathematical training to be able to assess the power and limits of biological models and to develop theories and models themselves. This innovative book will be an indispensable guide to the world of mathematical models for the next generation of biologists. A how-to guide for developing new mathematical models in biology. Provides step-by-step recipes for constructing and analyzing models. Interesting biological applications. Explores classical models in ecology and evolution. Questions at the end of every chapter. Primers cover important mathematical topics. Exercises with answers. Appendixes summarize useful rules. Labs and advanced material available.

Rosemary, 2003-04 *Solutions Manual to Accompany Models for Life* Jeffrey T. Barton, 2016-03-07 A solutions manual to accompany *An Introduction to Discrete Mathematical Modeling with Microsoft Office Excel*. With a focus on mathematical models based on real and current data. *Models for Life: An Introduction to Discrete Mathematical Modeling with Microsoft Office Excel* guides readers in the solution of relevant practical problems by introducing both mathematical and Excel techniques. The book begins with a step-by-step introduction to discrete dynamical systems which are mathematical models that describe how a quantity changes from one point in time to the next. Readers are taken through the process language and notation required for the construction of such models as well as their implementation in Excel. The book examines single compartment models in contexts such as population growth, personal finance, and body weight and provides an introduction to more advanced multi-compartment models via applications in many areas including military combat, infectious disease, epidemics, and ranking methods. *Models for Life: An Introduction to Discrete Mathematical Modeling with Microsoft Office Excel* also features a modular organization that after the first chapter allows readers to explore chapters in any order. Numerous practical examples and exercises that enable readers to personalize the presented models by using their own data. Carefully selected real-world applications that motivate the mathematical material such as predicting blood alcohol concentration, ranking sports teams, and tracking credit card debt. References throughout the book to disciplinary research on which the presented models and model parameters are based in order to provide authenticity and resources for further study. Relevant Excel concepts with step-by-step guidance including screenshots to help readers better understand the presented material. Both mathematical and graphical techniques for understanding concepts such as equilibrium values, fixed points, disease endemicity, maximum sustainable yield, and a drug's therapeutic window. A companion website that includes the referenced Excel spreadsheets, select solutions to homework problems, and an instructor's manual with solutions to all homework problems, project ideas, and a test bank.
