Asymptotic Geometric Analysis, Part II Shiri Artstein-Avidan, Apostolos Giannopoulos, Vitali D. Milman, 2021-12-13 This book is a continuation of Asymptotic Geometric Analysis Part I which was published as volume 202 in this series Asymptotic geometric analysis studies properties of geometric objects such as normed spaces convex bodies or convex functions when the dimensions of these objects increase to infinity The asymptotic approach reveals many very novel phenomena which influence other fields in mathematics especially where a large data set is of main concern or a number of parameters which becomes uncontrollably large One of the important features of this new theory is in developing tools which allow studying high parametric families Among the topics covered in the book are measure concentration isoperimetric constants of log concave measures thin shell estimates stochastic localization the geometry of Gaussian measures volume inequalities for convex bodies local theory of Banach spaces type and cotype the Banach Mazur compactum symmetrizations restricted invertibility and functional versions of geometric notions and inequalities Union List of Selected Serials in the University of Michigan Library, 1984 *Current Index to Journals in Education, Semi-Annual Cumulation, July-December, 1976*, 1976-10 *Dehn Fillings of Knot Manifolds Containing Essential Twice-Punctured Tori* Steven Boyer, Cameron McA. Gordon, Xingru Zhang, 2024-04-17 View the abstract **Analysis, Complex Geometry, and Mathematical Physics** Paul M. N. Feehan, Jian Song, Ben Weinkove, Richard A. Wentworth, 2015-07-21 This volume contains the proceedings of the Conference on Analysis Complex Geometry and Mathematical Physics In Honor of Duong H Phong which was held from May 7 11 2013 at Columbia University New York The conference featured thirty speakers who spoke on a range of topics reflecting the breadth and depth of the research interests of Duong H Phong on the occasion of his sixtieth birthday A common thread familiar from Phong's own work was the focus on the interplay between the deep tools of analysis and the rich structures of geometry and physics Papers included in this volume cover topics such as the complex Monge-Ampère equation pluripotential theory geometric partial differential equations theories of integral operators integrable systems and perturbative superstring theory *Modern Geometry* Vicente Muñoz, Ivan Smith, Richard P. Thomas, 2018-09-05 This book contains a collection of survey articles of exciting new developments in geometry written in tribute to Simon Donaldson to celebrate his 60th birthday Reflecting the wide range of Donaldson's interests and influence the papers range from algebraic geometry and topology through symplectic geometry and geometric analysis to mathematical physics Their expository nature means the book acts as an invitation to the various topics described while also giving a sense of the links between these different areas and the unity of modern geometry **Resolvent, Heat Kernel, and Torsion under Degeneration to Fibered Cusps** Pierre Albin, Frédéric Rochon, David Sher, 2021-06-21 Manifolds with fibered cusps are a class of complete non-compact Riemannian manifolds including many examples of locally symmetric spaces of rank one We study the spectrum of the Hodge Laplacian with coefficients in a flat bundle on a closed manifold undergoing degeneration to a manifold with fibered

cusps We obtain precise asymptotics for the resolvent the heat kernel and the determinant of the Laplacian Using these asymptotics we obtain a topological description of the analytic torsion on a manifold with bered cusps in terms of the R torsion of the underlying manifold with boundary *Current Index to Journals in Education* ,1987-07 **Semitoric**
