

Tips to Protect Your Data

Data breaches are common and increasing, even on seemingly secure platforms. It is your responsibility to protect your own data. Follow these tips to help safeguard your data and devices.

Secure Your Wi-Fi

Securing your Wi-Fi is crucial to keep your data secure. If your network is not secure, it is easy for people to access it, and steal data from your devices. It is equally as easy for bad actors to hijack your connection to conduct crime.

Configure Privacy Settings

To make devices more secure, customise advanced device privacy and browser settings. Block auto cookie and location tracking. Block auto file download and disable auto-run of Flash.

Keep Social Media Private

Social engineers may carry out targeted attacks by extracting personal information about an individual from their digital footprint. Keep a check on who you add as connections on social media platforms, and ensure your passwords follow above stated protocol.

Don't Save Information

Websites and browsers allow you to save sensitive data such as passwords and credit card information for future use, but do not save it. Store your passwords in a password manager, and sensitive information in encrypted files.

Verify Before you Click

Links, pop-ups and downloads can contain viruses and malware. Make sure to verify the source before clicking.

Disable Bluetooth and Wi-Fi

Bluetooth and Wi-Fi settings can be exploited if not disabled when not in use. Do not perform online shopping, banking, or other tasks that involve sensitive data when on a public Wi-Fi.

Use Random Passphrases

For strong passwords, use random passphrases of at least 15 characters in length. Do this in combination with standard password protocols. These phrases should not include any personal information and should be unique for every account and device.

Protect Your Identity

Personally identifiable information (PII) such as phone number, birthdate and bank account details, can be used to identify, locate, or contact an individual. Be cautious of emails or phone calls that ask for sensitive information, even if they appear from a legitimate source.

Avoid Unknown Sites

Check security protocols, certifications, and a secure payment gateway on websites. Cyber criminals create thousands of fake sites, often spoofs of a legitimate sites, to spread malware, carry out spam campaigns and phishing attacks.

Carefully Back-up Data

Although having a data back-up is advisable, make sure you control where your data is uploaded and stored, and who has access to it. Disable auto back-ups.

If you notice anything suspicious, inform your cyber security team or your manager instantly, so that immediate action can be taken to mitigate the cyber threat. Reach out to our forensics team for 24/7 support: forensics@securityhq.com | +44 20 3327 0698
