Seismic Petrophysics in Quantitative Interpretation Lev Vernik,2016-10-15 Exploration and characterization of conventional and unconventional reservoirs using seismic technologies are among the main activities of upstream technology groups and business units of oil and gas operators. However, these activities frequently encounter difficulties in quantitative seismic interpretation due to remaining confusion and new challenges in the fast-developing field of seismic petrophysics. *Seismic Petrophysics in Quantitative Interpretation* shows how seismic interpretation can be made simple and robust by integration of the rock physics principles with seismic and petrophysical attributes bearing on the properties of both conventional thickness net gross lithology porosity permeability and saturation and unconventional thickness lithology organic richness thermal maturity reservoirs. Practical solutions to existing interpretation problems in rock physics based amplitude versus offset AVO analysis and inversion are addressed in the book to streamline the workflows in subsurface characterization. Although the book is aimed at oil and gas industry professionals and academics concerned with utilization of seismic data in petroleum exploration and production, it could also prove helpful for geotechnical and completion engineers and drillers seeking to better understand how seismic and sonic data can be more thoroughly utilized.

SAS Graphics for Clinical Trials by Example Kriss Harris, Richann Watson,2020-11-25 Create industry-compliant graphs with this practical guide for professionals. Analysis of clinical trial results is easier when the data is presented in a visual form. However, clinical graphs must conform to specific guidelines in order to satisfy regulatory agency requirements. If you are a programmer working in the health care and life sciences industry and you want to create straightforward visually appealing graphs using SAS, then this book is designed specifically for you. Written by two experienced practitioners, the book explains why certain graphs are requested, gives the necessary code to create the graphs, and shows you how to create graphs from ADaM data sets modeled on real-world CDISC pilot study data. *SAS Graphics for Clinical Trials by Example* demonstrates step-by-step how to create both simple and complex graphs using Graph Template Language (GTL) and statistical graphics procedures including the SGPLOT and SG PANEL procedures. You will learn how to generate commonly used plots such as Kaplan-Meier plots and multi-cell survival plots, as well as special-purpose graphs such as Venn diagrams and interactive graphs. Because your graph is only as good as the aesthetic appearance of the output, you will learn how to create a custom style, change attributes, and set output options. Whether you are just learning how to produce graphs or have been working with graphs for a while, this book is a must-have resource to solve even the most challenging clinical graph problems.

Modified Mass-spring System for Physically Based

Deformation Modeling Oussama Jarrousse,2014-09 Mass spring systems are considered the simplest and most intuitive of all deformable models They are computationally efficient and can handle large deformations with ease But they suffer several intrinsic limitations In this book a modified mass spring system for physically based deformation modeling that addresses the limitations and solves them elegantly is presented Several implementations in modeling breast mechanics heart mechanics and for elastic images registration are presented

Neutron Stars and NuSTAR Varun B. Bhlerao,2012-11 This book centers around the study of neutron stars especially those in massive binary systems To this end it has two distinct components the observational study of neutron stars in massive binaries with a goal of measuring neutron star masses and participation in NuSTAR the first imaging hard X ray mission one that is extremely well suited to the study of massive binaries and compact objects in our Galaxy The Nuclear Spectroscopic Telescope Array NuSTAR is a NASA Small Explorer mission that will carry the first focusing high energy X ray telescope to orbit NuSTAR has an order of magnitude better angular resolution and has two orders of magnitude higher sensitivity than any currently orbiting hard X ray telescope I worked to develop calibrate and test CdZnTe detectors for NuSTAR I describe the CdZnTe detectors in comprehensive detail here from readout procedures to data analysis Detailed calibration of detectors is necessary for analyzing astrophysical source data obtained by the NuSTAR I discuss the design and implementation of an automated setup for calibrating flight detectors followed by calibration procedures and results Neutron stars are an excellent probe of fundamental physics The maximum mass of a neutron star can put stringent constraints on the equation of state of matter at extreme pressures and densities From an astrophysical perspective there are several open questions in our understanding of neutron stars What are the birth masses of neutron stars How do they change in binary evolution Are there multiple mechanisms for the formation of neutron stars Measuring masses of neutron stars helps answer these questions Neutron stars in high mass X ray binaries have masses close to their birth mass providing an opportunity to disentangle the role of nature and nurture in the observed mass distributions In 2006 masses had been measured for only six such objects but this small sample showed the greatest diversity in masses among all classes of neutron star binaries Intrigued by this diversity which points to diverse birth masses we undertook a systematic survey to measure the masses of neutron stars in nine high mass X ray binaries In this book I present results from this ongoing project
