

Human Inheritance Lab

Objectives

To determine phenotypic characteristics and genotypes for human inheritable traits.
To determine the frequency (%) of dominant and recessive trait in population.

Materials

Index

Procedure

Obtain the phenotypic characteristics and the corresponding gene genotypes for the traits listed below:

- In the first row of the table 1, list the 27 characteristics. Then make sure that the dominant phenotype and the recessive phenotype. Use the examples in the table for correct labeling.
- In the corresponding of table 1, write your phenotypes and determine its dominance or recessive.
- In the third column of table 1, write your genotype for each trait.

Questions

- If you show the recessive trait, then you must be homozygous recessive.
- If you show dominant trait, you may be heterozygous/dominant or homozygous for that trait.
 - If one of your parents shows the recessive trait, then you must have passed on a gene for the recessive trait, and you must be heterozygous for that trait.
 - If neither of your parents shows the recessive trait, you may not know if you are heterozygous or homozygous dominant for that trait. In that case, you **may** provide genotypes (heterozygous and homozygous dominant).

*** If you need help, you may ask your parents about their traits. * DO NOT TALK TO OTHERS!

***** If your parents get married before you, then you can't ask them, please give **any** possible genotypes for dominant/dominant gene.
