**Hydrologic Cycle**

**Reading Passage**

Read the passage carefully before answering the questions that follow.

**The Hydrologic Cycle is a Natural Process**

The hydrologic cycle is a continuous process that moves water between the atmosphere, land, and oceans. It is a natural process that has been occurring since the beginning of time. The cycle is driven by the sun, which provides the energy for evaporation. Water evaporates from the oceans, lakes, and rivers, and from plants and animals. This water vapor rises into the atmosphere, where it cools and condenses into clouds. When the clouds become heavy, they release precipitation in the form of rain or snow. This precipitation falls on the land or the water. On the land, it can infiltrate the ground, becoming groundwater, or it can run off into the oceans, lakes, and rivers. On the water, it can evaporate back into the atmosphere, or it can be taken up by plants and animals. The cycle is a continuous process that is essential for life on Earth.

**Select the Correct Answer**
