

LIZARD EVOLUTION VIRTUAL LAB

Answer the following questions as you finish each module of the virtual lab or as a final assessment after completing the entire virtual lab.

Module 1: Ecomorphs

1. At the beginning of the virtual lab, you were asked to sort eight lizards into categories. What criteria did you initially use to make your groups? Did you revise your criteria later? Why?
I noticed the difference of the lizards' legs sizes. I did not revise my criteria. I felt as if there was a reason for the different leg sizes, perhaps due to habitat.
2. An adaptation is a structure or function that is common in a population because it enhances the ability to survive and reproduce in a particular environment. Provide one example and an explanation of one adaptation in the *Anolis* lizards.
Looking at the *a. sheplani* Hispaniola, it had short legs. I think a reasoning for this is, so it won't fall off any branches.
3. Provide one evolutionary explanation for why lizards living in the same part of the habitat (i.e., grass) would have similar characteristics.
Lizards that live in the same area tend to look alike or act alike because those same traits that helps them survive are the ones that are needed.
4. What is an ecomorph? Provide one example from the virtual lab.
Species with alike habitats and bodies. For instance, *a. sheplani* Hispaniola and *a. occultus* Puerto Rico. Both with short legs.
5. How is an ecomorph different from a species?
Ecomorph are a group of animals with similar bodies and habitats. Species are more detailed with physiology
6. Explain how a particular body feature of one of the lizard ecomorphs from the virtual lab is an adaptation to their particular niche.
As mentioned before, *a. occultus* Puerto Rico has short legs due to needing to climb on twigs.
