The Paradigm Shift to Multimodality in Contemporary Computer Interfaces Sharon Oviatt, Philip R. Cohen, 2015-04-01

During the last decade cell phones with multimodal interfaces based on combined new media have become the dominant computer interface worldwide. Multimodal interfaces support mobility and expand the expressive power of human input to computers. They have shifted the fulcrum of human computer interaction much closer to the human. This book explains the foundation of human centered multimodal interaction and interface design based on the cognitive and neurosciences as well as the major benefits of multimodal interfaces for human cognition and performance. It describes the data intensive methodologies used to envision prototype and evaluate new multimodal interfaces. From a system development viewpoint this book outlines major approaches for multimodal signal processing fusion architectures and techniques for robustly interpreting users meaning. Multimodal interfaces have been commercialized extensively for field and mobile applications during the last decade. Research also is growing rapidly in areas like multimodal data analytics affect recognition accessible interfaces embedded and robotic interfaces machine learning and new hybrid processing approaches and similar topics. The expansion of multimodal interfaces is part of the long term evolution of more expressively powerful input to computers a trend that will substantially improve support for human cognition and performance.

Universal Access in Human-Computer Interaction. Designing Novel Interactions Margherita Antona, Constantine Stephanidis, 2017-06-28

The three volume set LNCS 10277 10279 constitutes the refereed proceedings of the 11th International Conference on Universal Access in Human Computer Interaction UAHCI 2017 held as part of the 19th International Conference on Human Computer Interaction HCII 2017 in Vancouver BC Canada in July 2017 jointly with 14 other thematically similar conferences. The total of 1228 papers presented at the HCII 2017 conferences were carefully reviewed and selected from 4340 submissions. The papers included in the three UAHCI 2017 volumes address the following major topics: Design for All Methods and Practice Accessibility and Usability Guidelines and Evaluation User and Context Modelling and Monitoring and Interaction Adaptation Design for Children Sign Language Processing Universal Access to Virtual and Augmented Reality Non Visual and Tactile Interaction Gesture and Gaze Based Interaction Universal Access to Health and Rehabilitation Universal Access to Education and Learning Universal Access to Mobility Universal Access to Information and Media and Design for Quality of Life Technologies.

Advances in Design and Digital Communication II Nuno Martins, Daniel Brandão, 2021-10-21

This book reports on research findings and practical lessons featuring advances in the areas of digital and interaction design graphic design and branding design education society and communication in design practice and related ones. Embodying Data Qi Li,2020-06-19 This book investigates a new interactive data visualisation concept that employs traditional Chinese aesthetics as a basis for exploring contemporary digital technological contexts It outlines the aesthetic approach which draws on non Western aesthetic concepts specifically the Yijing and Taoist cosmological principles and discusses the development of data based digital practices within a theoretical framework that combines traditional Taoist ideas with the digital humanities The book also offers a critique of the Western aesthetics underpinning data visualisation in particular the Kantian sublime which prioritises the experience of power over the natural world viewed at a distance Taoist philosophy in contrast highlights the integration of the surface of the body and the surface of nature as a Taoist body rather than promoting an opposition of mind and body The book then explores the transformational potential between the human body and technology particularly in creating an aesthetic approach spanning traditional Chinese aesthetics and gesture based technology Representing a valuable contribution to the digital humanities the book helps readers understand data based artistic practices while also bringing the ideas of traditional Chinese aesthetics to Western audiences In addition it will be of interest to practitioners in the fields of digital art and data visualisation seeking new models
