

## Chapter 11 Intro to Genetics Test

### Multiple Choice

Identify the letter of the choice that best completes the statement or answers the question.

- Offspring that result from crosses between true-breeding parents with different traits
  - are true-breeding.
  - make up the F<sub>2</sub> generation.
  - make up the parental generation.
  - are called hybrids.
- Mendel concluded that traits are
  - not inherited by offspring.
  - inherited through the passing of factors from parents to offspring.
  - determined by dominant factors only.
  - determined by recessive factors only.
- When Mendel crossed true-breeding tall plants with true-breeding short plants, all the offspring were tall because
  - the allele for tall plants is recessive.
  - the allele for short plants is dominant.
  - the allele for tall plants is dominant.
  - they were true-breeding like their parents.
- In the P generation, a tall plant was crossed with a short plant. Short plants reappeared in the F<sub>2</sub> generation because
  - some of the F<sub>2</sub> plants produced gametes that carried the allele for shortness.
  - the allele for shortness is dominant.
  - the allele for shortness and the allele for tallness segregated when the F<sub>1</sub> plants produced gametes.
  - they inherited an allele for shortness from one parent and an allele for tallness from the other parent.
- The principles of probability can be used to
  - predict the traits of the offspring produced by genetic crosses.
  - determine the actual outcomes of genetic crosses.
  - predict the traits of the parents used in genetic crosses.
  - decide which organisms are best to use in genetic crosses.
- A Punnett square shows all of the following EXCEPT
  - all possible results of a genetic cross.
  - the genotypes of the offspring.
  - the alleles in the gametes of each parent.
  - the actual results of a genetic cross.
- How many different allele combinations would be found in the gametes produced by a pea plant whose genotype was RrYY?
  - 2
  - 4
  - 8
  - 16
- A cross of a white hen with a black rooster produces erminette-color offspring. This type of inheritance is known as
  - incomplete dominance.
  - polygenic inheritance.
  - codominance.
  - multiple alleles.
