First Symposium on Artificial Intelligence for Mathematics Education. Book of Abstracts (AI4ME 2020) Philippe R. Richard , Steven Van Vaerenbergh , M. Pilar Vélez , 2020-10-29 The digital revolution that we have experienced since the last quarter of the twentieth century has had some influence yet to be analysed and extended on the way mathematics is made taught and learned While the rate of innovation in these technologies is growing exponentially the potential impact of most information technologies on mathematical education remains to be fully exploited In particular several authoritative voices point out that the technology that will most likely transform education in the coming years is artificial intelligence AI Interestingly today AI is mainly associated with technologies to automate tasks and lower costs thus serving primarily the interests of the political administrative industrial and commercial world In this scenario the world of education and more specifically didactics appears at best as a mere user of AI techniques developed in other fields forgetting that AI should play a much more relevant role here serving the human being who is doing his work as a mathematician or who is learning mathematics The AI4ME symposium at the International Centre for Mathematical Meetings CIEM in Castro Urdiales is a space for research and reflection to better understand the interconnected challenges of instrumental learning of mathematics and instrumental mathematics taking advantage of the achievements and opportunities of Artificial Intelligence for Mathematics Education This book of abstracts gathers the summaries of the talks presented at the symposium as well as the conclusions of each of the four thematic groups

Adventures in Dynamic Geometry Gerry Stahl, 2015-10-06 Math games and workbooks with topics for online small groups of teachers or students to collaboratively learn dynamic geometry The approach is based on *Translating Euclid* The many GeoGebra files used in VMT courses are pictured in the workbook Several versions of the workbooks are available including the version used in WinterFest 2013 and analyzed in *Translating Euclid and Constructing Dynamic Triangles Together* Also includes the content of a game version that is available as a GeoGebraBook

Automated Deduction in Geometry Francisco Botana, Pedro Quaresma, 2015-07-17 This book constitutes the thoroughly refereed post workshop proceedings of the 10th International Workshop on Automated Deduction in Geometry ADG 2014 held in Coimbra Portugal in July 2014 The 11 revised full papers presented in this volume were carefully selected from 20 submissions The papers show the trend set of current research in automated reasoning in geometry

 Unterrichtsentwurf aus dem Jahr 2009 im Fachbereich Didaktik Mathematik Note 1 0 Staatliches Seminar f r Didaktik und Lehrerbildung Gymnasien und Sonderschulen Heidelberg Sprache Deutsch Abstract In den letzten zwei Jahrzehnten sind eine Vielzahl neuer Softwareprogramme f r den Mathematikunterricht auf den Markt gekommen Die meisten dieser Programme sind jedoch entweder dynamische Geometriesysteme oder Computeralgebrasysteme 1 vgl 6 Dynamische Geometriesysteme wie beispielsweise Cinderella geben die M glichkeit elementargeometrische Gebilde so zu bewegen dass die gegenseitigen Lagebeziehungen erhalten bleiben vgl 7 Oft fehlt diesen Programmen die M glichkeit eine algebraische Darstellung in Form von Gleichungen Koordinaten oder hnlichem anzuzeigen zu lassen welche dann in einem Algebrafenster erneut modifiziert werden k nnen Den dynamischen Geometriesystemen stehen die CAS gegen ber Diese Programme sind dazu pr destiniert algebraische Strukturen einzugeben Sie veranschaulichen dar ber hinaus sogar die algebraischen Objekte in geometrischer Weise lassen jedoch in der Mehrheit der F lle keine Ver nderung am geometrischen Gebilde selbst zu Geo Gebra dagegen ist ein Programm welches eine bidirektionale Verkn pfung zwischen Geometrie und Algebra zul sst vgl 7 Bidirektional bedeutet hier dass zum einen algebraische in gegebene Objekte nachtr glich auf dem Zeichenblatt in geometrischer Weise ver nderet werden k nnen und zum anderen geometrische in gegebene Objekte im Algebrafenster variiert werden k nnen Da die Sch lerinnen und Sch ler 2 Schwierigkeiten mit den unterschiedlichen Darstellungsformen von Funktionen haben vgl 3 entscheide ich mich f r die Erforschung von Parameterfunktionen und deren Kurvenscharen mit GeoGebra Da sich dieses Programm durch seine intuitive Bedienung in besonderem Ma e auszeichnet kann davon ausgegangen werden dass die Sch ler in schneller Zeit die Basisfunktionen des Programms f r die Analyse der Zusammenh nge von Funktionsgleichung und Schaubild nutzen k nnen

Introduction to GeoGebra Judith Hohenwarter,Markus Hohenwarter,2008

Mathematical Modeling Jonas Hall,Thomas Lingefj rd,2016-06-13 A logical problem based introduction to the use of GeoGebra for mathematical modeling and problem solving within various areas of mathematics A well organized guide to mathematical modeling techniques for evaluating and solving problems in the diverse field of mathematics Mathematical Modeling Applications with GeoGebra presents a unique approach to software applications in GeoGebra and WolframAlpha The software is well suited for modeling problems in numerous areas of mathematics including algebra symbolic algebra dynamic geometry three dimensional geometry and statistics Featuring detailed information on how GeoGebra can be used as a guide to mathematical modeling the book provides comprehensive modeling examples that

correspond to different levels of mathematical experience from simple linear relations to differential equations Each chapter builds on the previous chapter with practical examples in order to illustrate the mathematical modeling skills necessary for problem solving Addressing methods for evaluating models including relative error correlation square sum of errors regression and confidence interval Mathematical Modeling Applications with GeoGebra also includes Over 400 diagrams and 300 GeoGebra examples with practical approaches to mathematical modeling that help the reader develop a full understanding of the content Numerous real world exercises with solutions to help readers learn mathematical modeling techniques A companion website with GeoGebra constructions and screencasts Mathematical Modeling Applications with Geogebra is ideal for upper undergraduate and graduate level courses in mathematical modeling applied mathematics modeling and simulation operations research and optimization The book is also an excellent reference for undergraduate and high school instructors in mathematics *Exploring Advanced Euclidean Geometry with GeoGebra* Gerard A.

Venema, 2013-12-31 This book provides an inquiry based introduction to advanced Euclidean geometry It utilizes dynamic geometry software specifically GeoGebra to explore the statements and proofs of many of the most interesting theorems in the subject Topics covered include triangle centers inscribed circumscribed and escribed circles medial and orthic triangles the nine point circle duality and the theorems of Ceva and Menelaus as well as numerous applications of those theorems The final chapter explores constructions in the Poincare disk model for hyperbolic geometry The book can be used either as a computer laboratory manual to supplement an undergraduate course in geometry or as a stand alone introduction to advanced topics in Euclidean geometry The text consists almost entirely of exercises with hints that guide students as they discover the geometric relationships for themselves First the ideas are explored at the computer and then those ideas are assembled into a proof of the result under investigation The goals are for the reader to experience the joy of discovering geometric relationships to develop a deeper understanding of geometry and to encourage an appreciation for the beauty of Euclidean geometry The Potential and Challenges of the Use of Dynamic Software in Upper Secondary Mathematics

Sanela Mehanovic, 2011 An introduction of computer software into mathematics classrooms makes the didactical situation more complex compared with previous learning environments Blomh j 2005 A technological tool becoming a mathematic work tool in the hands of the students is a process that has turned up unexpectedly complex Artigue 2002 In addition to this problem the teachers as the users of the tool go through the same process while at the same time trying to integrate the tool into their teaching activities in a meaningful way For these reasons it seems important to contribute to the research focused on the learning and teaching conditions in environments where computer software is newly introduced in order to better understand impacts of the introduction of different software in mathematics classrooms In this study the dynamic mathematical software GeoGebra was used GeoGebra is freely available for a number of platforms and has drawn much attention during the last years with growing user communities www.GeoGebra.org However being generally available just

recently there are comparatively few studies on the use of GeoGebra in classroom settings In this thesis the introduction and integration of GeoGebra was investigated in two studies with different perspectives In the first study students work with GeoGebra in their mathematical activities related to the integral concept has been researched In the second study teachers utilization of the didactical potential has been investigated The results of the two studies show that GeoGebra as a mathematical tool in the hands of the students and the teachers can have a significant role in supporting their mathematical work if exploited in a from a didactical perspective adequate way A learning and teaching environment based on GeoGebra bring with it a possibility to work with mathematical concepts in a broader way compared with blackboard based classrooms GeoGebra s facilities makes it possible to communicate mathematics in different ways and expressing mathematical concepts in different representations in a more direct way than in non dynamical environments Communicating mathematics in different ways and expressing mathematics knowledge through different representations is of significant importance for students not least in relation to the new curriculum for mathematics in Sweden The Swedish National Agency for Education 2011 where these aspects are explicitly named as aims for students to work towards

Introduction of Discrete and Continuous Random Variable Trifunov Zoran, Karamazova Elena, Atanasova - Pacemska Tatjana, 2015-11-03 In this book by use of information technology free software GeoGebra and existing definitions random variable of discrete and continuous type will be visually introduced in a new way in addition to the traditional In the beginning will review the definition of events and determine their probability Then we will give emphasis on discrete random variable modeling probability situations with only two outcomes The event can be repeated finite or infinite number of times By analyses of examples we will go from Bernoulli through binomial to the geometric random variable in which way we would be able to discover the similarities and differences of these variables Continuous random variables with uniform exponential and normal distribution will be visually represented in the end We will see how graphics of random variables change depending on the values of their parameters The various problems will be visually presented by an applet developed in GeoGebra which is available on GeoGebra tube and help for easier visual representation of the problems i e the areas of definition as well as for a set of positive events in order to come to a solution of the problems
