Evolution

Q: How can populations evolve to form new species?

17.1 How do genes make evolution possible?

WHAT I KNOW

SAMPLE ANSWER: There are different variations of the same gene.

WHAT I LEARNED

SAMPLE ANSWER: Evolution occurs when the allele frequency in the gene pool of a population changes over time.

17.2 What makes a population's gene pool change?

SAMPLE ANSWER: Over time useful traits (and the genes that control them) accumulate in a population.

SAMPLE ANSWER: Genetic changes can affect the number and types of possible phenotypes organisms in a population can have. These changes provide the variation that populations need to evolve.

17.3 How do new species form?

SAMPLE ANSWER: The genome of a species changes enough that it becomes a new species.

SAMPLE ANSWER: Speciation sometimes occurs when populations become reproductively isolated.

17.4 What can genes tell us about an organism's evolutionary history?

SAMPLE ANSWER: Some species' genomes are very similar. These species are closely related. The opposite is true for species with very different genomes.

SAMPLE ANSWER: A molecular clock uses mutation rates in DNA to estimate the time that two species have been evolving independently.

Evolution Of Populations Chapter Answers:

The Role of Population Games in the Design of Optimization-Based Controllers Julian Barreiro-Gomez, 2018-08-01 This book reports on the implementation of evolutionary game theory in the design of distributed optimization based controllers. First it discusses how the classical population game approach can contribute to and complement the design of optimization based controllers. It shows how the features of this approach can be exploited to extend their capabilities in the solution of distributed optimization problems and examines density games in order to consider multiple coupled constraints and preserve the non centralized information requirements. Furthermore it establishes a close relationship between the possible interactions among agents in a population with constrained information sharing among different local controllers. It also discusses coalitional games focusing on the Shapley power index and proposes an alternative method of computing the latter which reduces computational time as well as a different way of finding it using distributed communication structures. All the proposed strategies are then tested on various control problems such as those related to the Barcelona water supply network, multiple continuous stirred tank reactors, various unmanned aerial vehicle systems and a water distribution system. This thesis examined at the Universitat Politècnica de Catalunya and Universidad de los Andes in 2017 received the award for best thesis in control from the control group of the Spanish Committee of Automatic Control CEA in the same year. *Videodisc Correlatn GD Modern Biology 99* Holt Rinehart & Winston, 1998-02 **Evolution of Life** Cecie Starr, Ralph Taggart, 1998 This selected paperback binding of the Eighth Edition of *Biology: The Unity and Diversity of Life* gives instructors the option of purchasing a shorter text covering selected excerpted topics.
