villages. The distribution of rural population is not uniform throughout the country as we see Bihar and Sikkim have very high percentage of rural population. Goa and Maharashtra have just over 50% people residing in villages and rest in urban areas. The urban population has increased significantly in areas where economic activities and health conditions have gained momentum in last few decades. In tribal, hilly or non-irrigational areas or flood prone areas of Peninsular India the speed of urbanization has remained low and hence the density of population is less in those areas.

## Question 7:

What factors lead to high growth rate of urban population throughout the country?

### Answer 7:

The nation's economy saw a rise due to industrial revolution and the invention of new technologies increased the standard of living of people living in urban areas. The growth of public sector resulted in development of public transport, roads, water supply, electricity, and hence the infrastructure of urban areas. There are enormous employment opportunities in urban areas with better paid jobs in cities which offers higher standard of living with excellent health infrastructure that attracts people from rural areas. With increasing population densities and changing employment patterns, many rural settlements situated near cities are meeting the 'urban area' criteria adopted by India's census office, and are therefore being classified as 'urban.'

Another phenomenon adding to India's urbanization process is the saturation of large cities, and accumulation of population and economic activities in Tier II cities, which are becoming the new growth centres. The UN, too, highlights that India's urban population size will nearly double between 2018 and 2050, from 461 to 877 million. Most national governments, including India, consider urbanization as an important component of their development agenda. This is in recognition of the undeniable benefits that urbanization can bring to nations and societies. When people with different skills, ideologies, social and cultural backgrounds get together and engage in productive activities and dialogues, a creative environment is formed, and the outputs can be extraordinarily helpful.

## Question 8:

Work participation rate will be higher in rural or sub-urban areas. Justify.

### Answer 8:

The Labour force participation rate is the number of persons in the Labour force as a percentage of the working-age population. The Labour force is the sum of the number of persons employed and the number of persons unemployed. Rural or sub-urban areas have more participation because a majority of people are engaged in agriculture and allied sectors. In urban areas, the worker-population ratio is about 34 whereas in rural India, the ratio is about 42. It is because in urban areas, a considerable section is able to study in various educational institutions. Urban people have a variety of employment opportunities. They look for the appropriate job to suit their qualifications and skills.

About 54.6 percent of total working population are cultivators and agricultural laborers, whereas only 3.8% of workers are engaged in household industries and 41.6 % are other workers including non-household industries, trade, commerce, construction and repair and other services.

## Question 9:

Identify some issues in which India is ahead of or lagging behind its neighbors.

### Answer 9:

India has second largest annual defense budget behind China. India has a domestic defense industry of which 80% is government owned. With strength of over 1.4 million active personnel, it is the world's
