**Evolutionary Biology** Mitchell B. Cruzan, 2018-09-11 Many of the characteristics that distinguish plants from other living organisms can be traced to their origin early in the history of life Features such as a multicellular haploid life stage prevalent hermaphroditism self fertilization and general dependence on biotic and abiotic vectors for reproduction stem directly from the ability of plants to obtain energy from the sun This novel mode of energy capture had far ranging implications for plant evolution It not only fueled the tremendous diversification of life on Earth but also had far ranging implications for the evolution of early photosynthetic organisms and eventually land plants Understanding the evolutionary processes for the proliferation and diversification of plants requires an appreciation of their unique biological features While the processes of mutation selection genetic drift and gene flow are the same for both plants and animals there are specific characteristics of plants that affect their evolution Unique traits of plants affect everything from the fate of mutations to

exposure to selection in the haploid life stage to the distribution of genetic variation within and among populations and ultimately the rates and patterns of diversification This book examines the origins of the unique features of plants and the implications of these features for evolutionary processes Author Mitchell B Cruzan provides discussion of contemporary topics such as population genetics phylogeography phylogenetics ecological genetics and genomics The content covered is essential to a wide range of advanced courses in plant biology Karl Pearson's Early Statistical Papers Karl Pearson,1956

Religion covers the present state of knowledge on human diversity and its adaptative significance through a broad and

eclectic selection of representative chapters This transdisciplinary work brings together specialists from various fields who

rarely interact including geneticists evolutionists physicians ethologists psychoanalysts anthropologists sociologists

theologians historians linguists and philosophers Genomic diversity is covered in several chapters dealing with biology

including the differences in men and apes and the genetic diversity of mankind Top specialists known for their open mind and

broad knowledge have been carefully selected to cover each topic The book is therefore at the crossroads between biology

and human sciences going beyond classical science in the Popperian sense The book is accessible not only to specialists but

also to students professors and the educated public Glossaries of specialized terms and general public references help

nonspecialists understand complex notions with contributions avoiding technical jargon Provides greater understanding of
