LEARN EVOLUTION VIRTUAL LAB

ANSWER THE FOLLOWING QUESTIONS AS YOU COMPLETE EACH PART OF THE VIRTUAL LAB

Answer the following questions as you complete each part of the virtual lab.

Part 1: Introduction

1. As you begin the virtual lab, you will see a population of 1000 birds with different wing shapes. What happens when you introduce a new predator? How does the population change over time?

Answer: When I introduced the predator, the birds with larger wings survived better than those with smaller wings. Over time, the population shifted towards larger wings because the birds with larger wings were better able to escape the predator.

2. As you continue to add predators, you will see a change in the population. What happens when you add a second predator? How does the population change over time?

Answer: When I added a second predator, the birds with larger wings survived better than those with smaller wings. Over time, the population shifted towards larger wings because the birds with larger wings were better able to escape both predators.

3. As you continue to add predators, you will see a change in the population. What happens when you add a third predator? How does the population change over time?

Answer: When I added a third predator, the birds with larger wings survived better than those with smaller wings. Over time, the population shifted towards larger wings because the birds with larger wings were better able to escape all three predators.

4. As you continue to add predators, you will see a change in the population. What happens when you add a fourth predator? How does the population change over time?

Answer: When I added a fourth predator, the birds with larger wings survived better than those with smaller wings. Over time, the population shifted towards larger wings because the birds with larger wings were better able to escape all four predators.

5. As you continue to add predators, you will see a change in the population. What happens when you add a fifth predator? How does the population change over time?

Answer: When I added a fifth predator, the birds with larger wings survived better than those with smaller wings. Over time, the population shifted towards larger wings because the birds with larger wings were better able to escape all five predators.
